Foreword

It is heartening to note that Jomotsangkha Wildlife Sanctuary is bringing out a booklet on Pictorial Record of **Birds** in Jomotsangkha Wildlife Sanctuary. It is the first pictorial record of bird in the park. A total of 240 birds have been recorded so far in the park out of which 171 species have photographic record. It is important to assess and document biodiversity in the park in order to take suitable management decisions. A good data is required to monitor and evaluate the effective management of the park.

This books will serve as the first official record of Birds in the park. It would serve as a useful document for park staff and other stakeholders. I am confident that more species will be added to the list in the coming years.

I am extremely glad to note that the Park is launching this book on the important occasion of World Ranger Day 2018. It is an opportunity to commemorate the hard work performed by frontline staff to protect rich biodiversity of our country. I take this opportunity to express my sincere appreciation to Park Manager and all field staffs for your effort to come up with this document.

Phento Tshering
DIRECTOR

Department of Forests and Park Services

Acknowledgement

Jomotsangkha Wildlife Sanctuary (JWS) would like to thank a team of dedicated staff namely, Tashi Tshering, Sr.Forest Ranger, Tashi, Forester, Lungten Norbu, Forester and Sonam Dendup Forest Ranger for your tireless effort to come up with this booklet. There are two individuals Mr. Tshering Dorji, Assistant Engineer of Jomotsangkha Dungkhag and Mr. Karma Wangdi, Teacher at Gelephu LSS who deserve a deep appreciation and exceptional gratitude for contributing photos of birds.

The management would like to thank all staff under JWS for your contribution in your own small ways to this publication.

Lastly, the management would like to thank WWF-Bhutan for your generous financial support for printing this booklet.

Ugyen Tshering
PARK MANAGER

Introduction

Jomotsangkha Wildlife Sanctuary is located in the south-eastern most part of the country bordering Arunachal Pradesh and Assam states of India. Currently JWS is in the process of documenting biodiversity of the park. Today, we have recorded photographic records of 231 species of birds. Interestingly, all the four species of hornbill are recorded in the park throughout the year. In Bhutan, JWS is the only park which has photographic record of a rare and beautiful birds such as Timmicks Tragopan and Blyth Tragopan.

This booklet is a result of few bird enthusiast in the park. There is no formal survey carried out to record these many species of birds. It was a part of hobby that the birds were photographs by park staff and some photos were taken during other park activities. Furthermore, few individual civil servant working in other agency are interested in birds and have contributed photos. This booklet will serve as the first official record of the birds in the park. We have a plan to produce another edition of this kind of book in future upon additional record of birds and study of their distribution range in the park.

Common Name: Besra (female)

Scientific name: *Accipiter virgatus*

Family: Aegithinidae

IUCN status: Least Concern

Common Name: Crested Serpent eagle

Scientific name: *Spilornis cheela*

Family: Aegithinidae
