FOREWORD

Bhutan is a biologically diverse country with incredible diversity of wildlife species and ecosystems, maintaining a level of ecological integrity unparalleled for a biodiversity hotspot. Environmental conservation is one of the four pillars of Gross National Happiness, a holistic and sustainable approach to development, which balances material and non-material values with the conviction that humans want to search for happiness.

More than 50% of Bhutan's land area is formally protected and the constitution of Bhutan commits to maintaining at least 60% of the country under forest cover in perpetuity. The existing protected areas hold globally significant populations of many plant and animal species, including endangered and charismatic species like tigers, elephants and snow leopards. However, there are a number of other sites of global biodiversity significance that are beyond the protected area network that are under increasing threat from various anthropogenic activities and have greater risk of losing the species. Therefore, there is an urgent need to ensure that all sites of importance for biodiversity are identified, mapped and documented.

The Baseline Biodiversity Report has been developed by Gedu Forest Division of the Department of Forests & Park Services to document and maintain baseline biodiversity through a checklist of species recorded through primary and secondary data.

I am very pleased and encouraged that Gedu Forest Division has come up with such an important baseline biodiversity report to enable evidence based decision making for preservation, protection, conservation and sustainable forest management. I am optimistic that this important report will help not only the Division and Department at large for implementation of any forestry and environmental activities, but also serve as a reference for decision makers, planners, researchers, academicians and students.

Lastly, I would like to take this opportunity to sincerely acknowledge the collective efforts put in by the colleagues of Gedu Forest Division, NCD and UWICER in bringing out this publication. Also, I would like to express my sincere gratitude to ICIMOD for funding the field survey and publication of this important document.

Tashi Delek!

Lobzang Dorji
DIRECTOR
Department of Forests and Park Services

ACKNOWLEDGEMENT

The Baseline Biodiversity Report of Gedu Forest Division is the first of its kind for Gedu Forest Division and this report is published to provide comprehensive finding on biodiversity with a check list of flora and fauna collected through the baseline biodiversity surveys and the review of secondary data.

Many individuals, agencies and organisations contributed to the accomplishments of this Baseline Biodiversity Report. Mr. Karma from Non-wood Forest Products and Agro-Forestry Sub-Centre, Darla under Ugyen Wangchuk Institute for Environmental Conservation and Research (UWICER) led the survey team in botanization in all the Sampled Biodiversity Monitoring Grids. Sincere acknowledgement to Mr. Rinzin Dorji, Sr. Forestry Officer of Gedu Forest Division for his efforts, hard work and dedication in coordinating the field surveys, analysis and the report writing.

Nature Conservation Division, Department of Forests and Park services provided the technical guidance and the secondary data for incorporation into the Baseline biodiversity Report. International Centre for Integrated Mountain Development (ICIMOD) provided the fund under Kangchenjunga Landscape Conservation and Development Initiative (KLCDI) for conducting this baseline biodiversity survey and publication of this report.

Most heartfelt thanks to all the colleagues of Gedu Forest Division, particularly those who were involved in the baseline surveys for their unwavering support and contribution during the field work, data compilation and sharing their experience .

Lastly, we are highly indebted to the Director, Department of Forests and Park Services for his invaluable advice, constant inspiration and continued guidance to bring out this important publication.

Pema Wangda
Chief Forestry Officer

1. Introduction

1.1 Background

Bhutan is a biologically diverse country in the eastern Himalayas (Myers et al., 2000). It is situated at the ecotone of two biogeographic realms, the Palearctic Realm and Indo-Malayan Zoogeographic Realms, and thus forms a part of Eastern Himalayan Biodiversity Hotspot. Forest Ecosystem constitutes the dominant Ecosystem diversity and vascular plants account for the largest portion of species diversity in Bhutan (NBC, 2014). Gedu Forest Division (GFD) is situated in the south-western part of Bhutan which harbours diverse Ecosystem diversity (forest, aquatic and agricultural ecosystem diversity) and species diversity (wild and domestic species diversity) attributed to its high elevation range and diverse habitat types.

Forest Ecosystem is most dominant one with 81.42% of the total land area under forest cover as compared to aquatic and agricultural ecosystem with 1.64% and 11.39% respectively (Forest Resource Management Division, 2017). GFD can be divided into three eco-floristic zones viz. Alpine Zone (4000+ masl), Temperate Zone (2,000-4,000 masl) and Sub-tropical Zone (150-2,000 masl) with different forest types such as tropical lowland forest, chirpine forest, broadleaved forest, broadleaf mixed with conifer forest, bluepine forest, mixed conifer forest, fir forest and alpine meadows and scrubs (Oshawa, 1987).

There are two major river basins (Wang chhu and Amo chhu) of Bhutan that drains through the GFD. There are few prominent lakes such as Shawgayla Lake, Lumila Lake, Phaktshoding Lake and small water holes including marshlands that contribute to the aquatic ecosystem of GFD. All of these contribute to the aquatic ecosystem of GFD.

Agricultural ecosystem of the GFD can be broadly classified into six major agro-ecological zones in accordance with the altitudinal range and climatic conditions (NBC, 2014). The six agro-ecological zones are Alpine, Cool Temperate, Warm Temperate, Dry Sub-tropical, Humid sub-tropical and wet sub-tropical (Biodiversity Action Plan, 2009).

Bhutan is also characterized by strong species diversity and density, with about 5,603 flowering plant species, under 220 families and 1,415 genera, close to 200 species of mammals (CBD, 2011), about 760 species of butterfly (Wangchuk et al., 2021) and 50 freshwater fish species (with many more species to be documented) and about 747 species of birds (Birdlife International, 2017). GFD also harbours diverse species along the altitudinal gradient of 150-4450masl (Dhendup and Dorji, 2018a) with different forest types and across different landscapes.

1.2 Objectives of the Report:

- i. To establish baseline biodiversity data through checklist of flora and fauna recorded in GFD.
- ii. Assimilation from secondary biodiversity data.
- iii. To serve as foundation for all the research and conservation activities in GFD.

2. Gedu Forest Division

2.1 Location, Area, Background and Status

GFD is one of the 14 Territorial Forest Divisions in Bhutan under Department of Forests and Park Services. It was upgraded as the GFD in the year 1988 from the Sub-Divisional Forest Office which was first opened in the year 1985. The division oversees the sustainable forest management, forest resource utilization and public services delivery under Chukha District. It is strategically located being along the Phuntsholing-Thimphu National highways which is a gateway for import and export of forestry products among others.

2.1.1 Location of Gedu Forest Division

GFD is located in South-Western part of the country, between $26^{\circ}43'$ - $27^{\circ}18'$ N and $89^{\circ}16'$ - $89^{\circ}44'$ E. It is adjacent to Buxa Tiger Reserve in West Bengal, India in the south; Dagana Territorial Forest Division in the east; Thimphu Territorial Forest Division in the north; and Samtse and Paro Territorial Forest Division in the west.

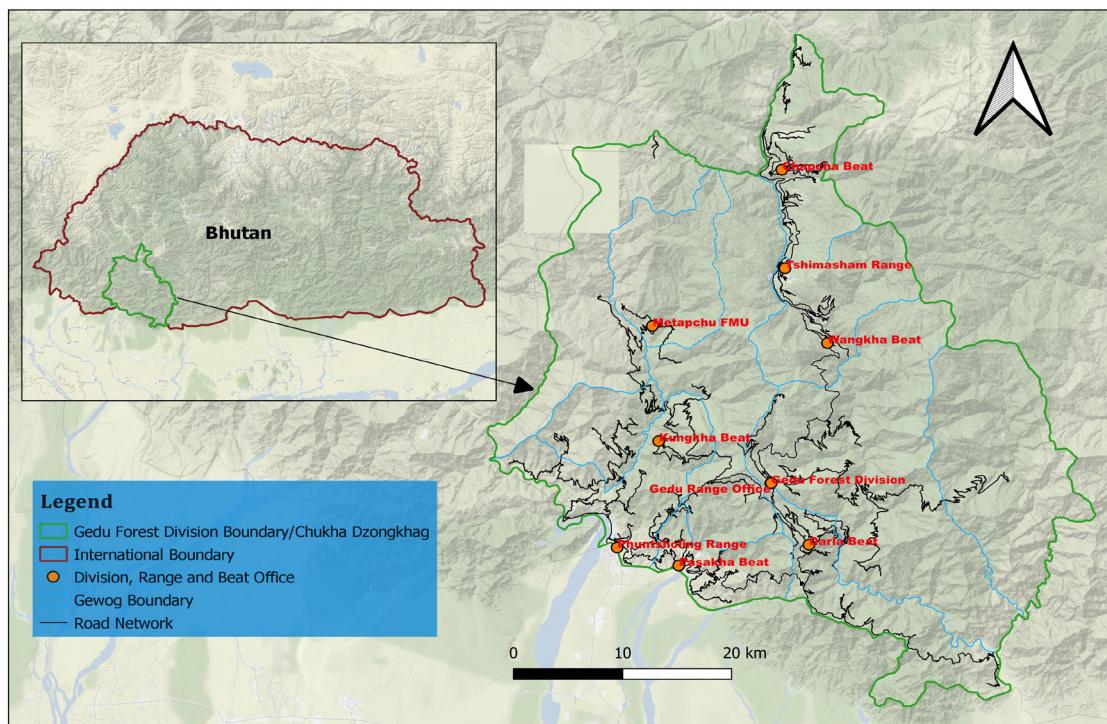

Figure 1: Map Showing location of Gedu Forest Division

2.1.2 Area Statement and Different forest management regimes

Gedu Forest Division's jurisdictional area covers 1879.77 sq.km(Forest Resource Management Divsion, 2017) in all the 11 Gewog of Chukha Dzongkhag. The Division Office has 3 Range Office, one each at Gedu, Tshimasham and Phuntsholing; five Beat Offices one each at Chapcha, Wangkha, Darla, Kungkha and Pasakha, and one Forest Management Unit (Metapchhu FMU).

GFD has different forest management regimes with 1 Forest Management Unit (FMU), 62 Community Forest Management Groups (CFMGs), 6 Non-wood Forest Product Groups, 1 Payment for Environmental Service group, 1 Important Bird area and 1 Local Forest Management Plan (LFMP). A significant portion of forest area is also under lease to Bhutan Board Products limited as production forest to produce raw materials for graded wood particle board.

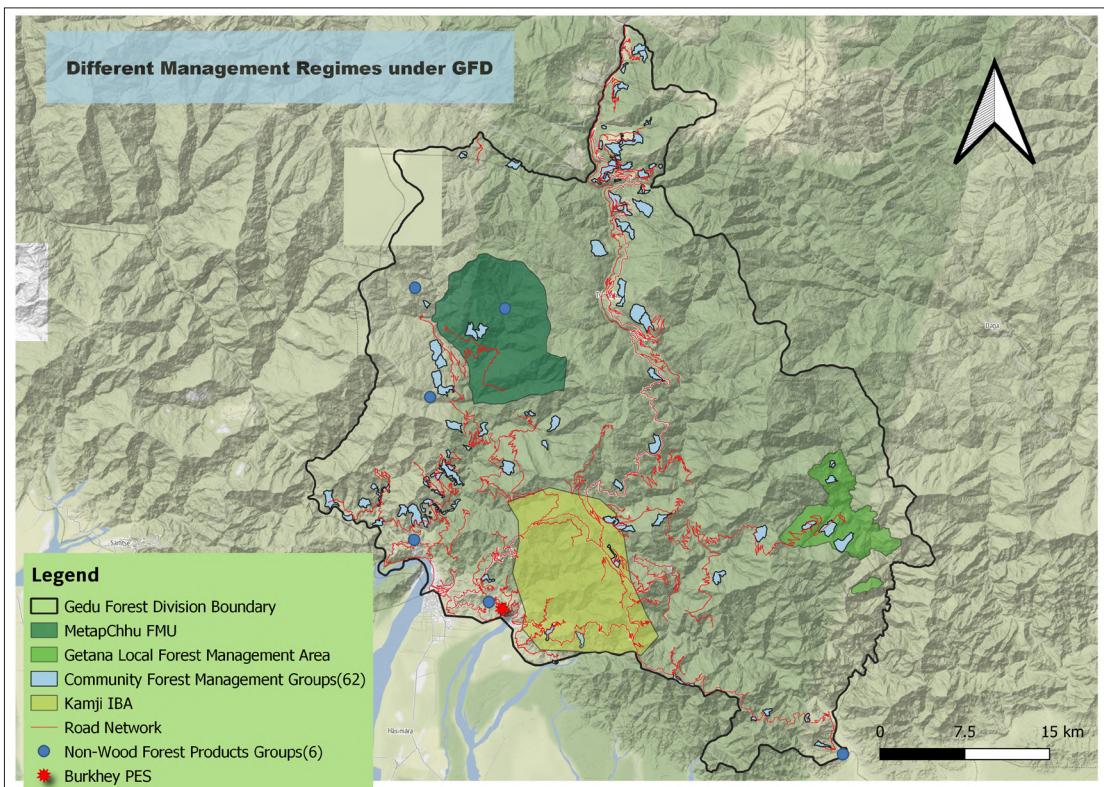

Figure 2: Different management regimes under GFD.

2.1.3 Forest Types

The forest covers about 89.26% (Forest Resource Management Division, 2017) of the total area of the GFD. Forest cover estimate is based on the forest defined in the National Forest Policy of Bhutan (NFP, 2011) which states that land with trees spanning more than 0.5 ha with trees higher than 5 meters and a canopy cover of more than 10%. Hence, the forest resources are still intact and a large number of hardwood species are grown. The number of trees per hectare is estimated to be 220 numbers, basal area of 8,930,964m² and growing stock volume of 82,958,251m³ in GFD (Department of Forests and Park Services, 2016).

The forest types of GFD ranges from low sub-tropical forest to high altitude rhododendron forest. Depending on the floristic characteristics, forest of GFD can be classified broadly into the following forest types;

Sl. No.	Forest Type	Altitude(masl)	Characteristic species
1	Rhododendron and Fir Forests	>3100	Rhododendron, Fir and Pedicularis.
2	Cool broadleaved Forest	2000-2900	<i>Acer spp., Betula alnoides, Exbucklandia spp., Lindera spp., Symplocos spp.</i>
3	Warm broadleaved Forest	2000-3000	<i>Alnus nepalensis, Michelia excelsa, Castanopsis indica, Engelhardia spicata, Macaranga postulate, Schima wallichii.</i>
4	Sub-Tropical Forests	150-1000	<i>Gmelia arborea, Ailanthus grandis, Chukrasia tabularis, Daubanga grandiflora.</i>

Adapted from (Grierson & Long, 1983).

The major forest cover of GFD is Broadleaf forest (73.11%), followed by Mixed conifer forest (12.30%), Bluepine forest (2.67%) and Fir forest (1.18%). The land use land cover map of GFD is as shown below in Figure 3.

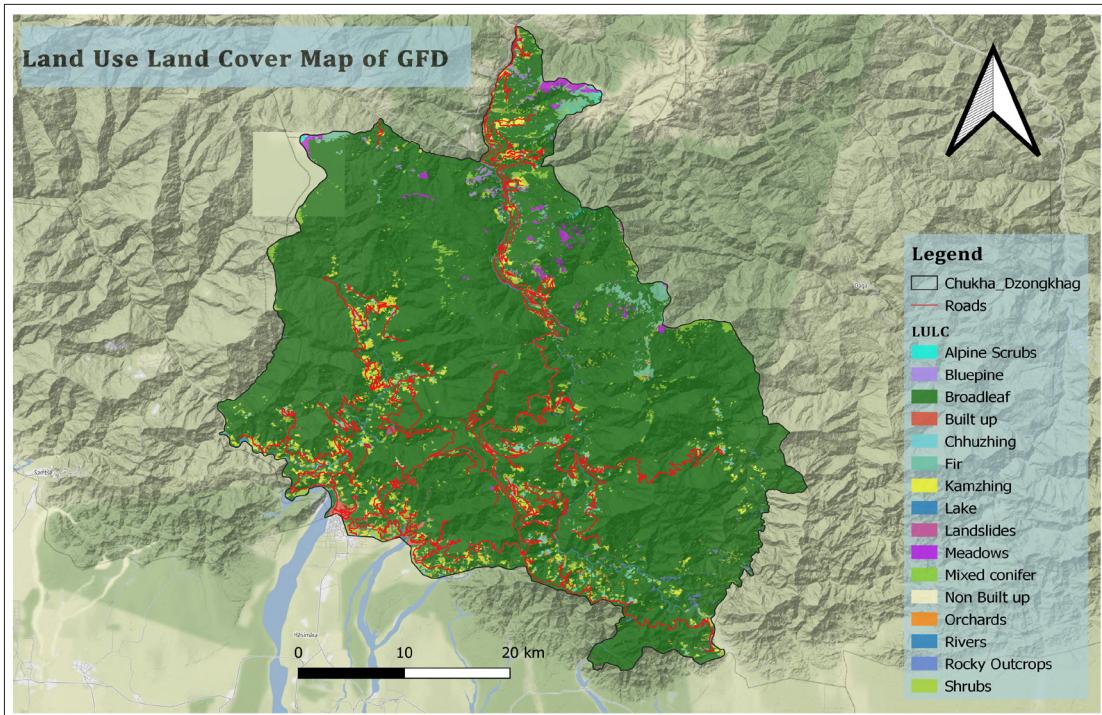

Figure 3: Land Use Land Cover Map of GFD.

2.1.4 Agro-ecological Zones of GFD

Gedu Forest Division has six major agro-ecological zones based on climatic conditions along the altitudinal gradients. The overview of the major agro-ecological zones based on the agricultural practices in dry land, wetland, orchards, Areca nut and Cardamom plantation among others that are followed in different altitude are depicted in Table 1 below.

Table 1: Agro-ecological Zones of GFD (Adapted from NBC, 2014)

Agro-ecological Zone	Altitude (masl)	Rainfall (mm)	Farming system, major crops and agriculture produce
Alpine	3600-4450	<650	Semi-nomadic people, yak herding, dairy products, barley, buckwheat, mustard and vegetables.
Cool Temperate	2600-3600	650-850	Yaks, cattle, sheep, horses, dairy products, barley, wheat and potatoes on dry land, buckwheat and mustard cultivation, temperate fruits and vegetables.

Warm Temperate	1800-2600	650-850	Rice on irrigated land, double cropping with wheat and mustard, barley and potatoes on dry land, temperate fruit trees, vegetables, cattle for draught and manure.
Dry Sub-Tropical	1200-1800	850-1200	Maize, rice, millet, pulses, fruit trees and vegetables, wild lemon grass, cattle, pigs and poultry.
Humid Sub-Tropical	600-1200	1200-2500	Irrigated rice rotated with mustard, wheat, pulses and vegetables, tropical fruit trees.
Wet Sub-Tropical	150-600	2500-5500	Irrigated rice rotated with mustard, wheat, pulses and vegetables, tropical fruit trees.

2.1.5 Legal status

Forest and Nature Conservation Act 1995, defines “forest” as “any land and water body whether or not under vegetative cover, in which no person has acquired a permanent and transferable right of use and occupancy, whether such land is located inside or outside the forest boundary pillar, and includes land registered in a person’s name as tsamdro (grazing land) or sokshing (wood lot for collection of leaf litter)”. Therefore, all such forest areas are declared as State reserved forest (SRF). Accordingly, the extent of SRF land is 177,456.61ha (95.33%) and 8692.66ha (4.67%) of human settlement and agricultural land which is of private(Forest Resource Management Divsion, 2017).

2.2 Permanent Site factors

2.2.1 Topography and slope

The Gedru Forest Division is in general moderate to steep sloping and mountainous with deeply incised valleys running mainly north-south. The elevation ranges from 150 m to 4450 m within an aerial distance of 77 km(Dhendup and Dorji, 2018a).

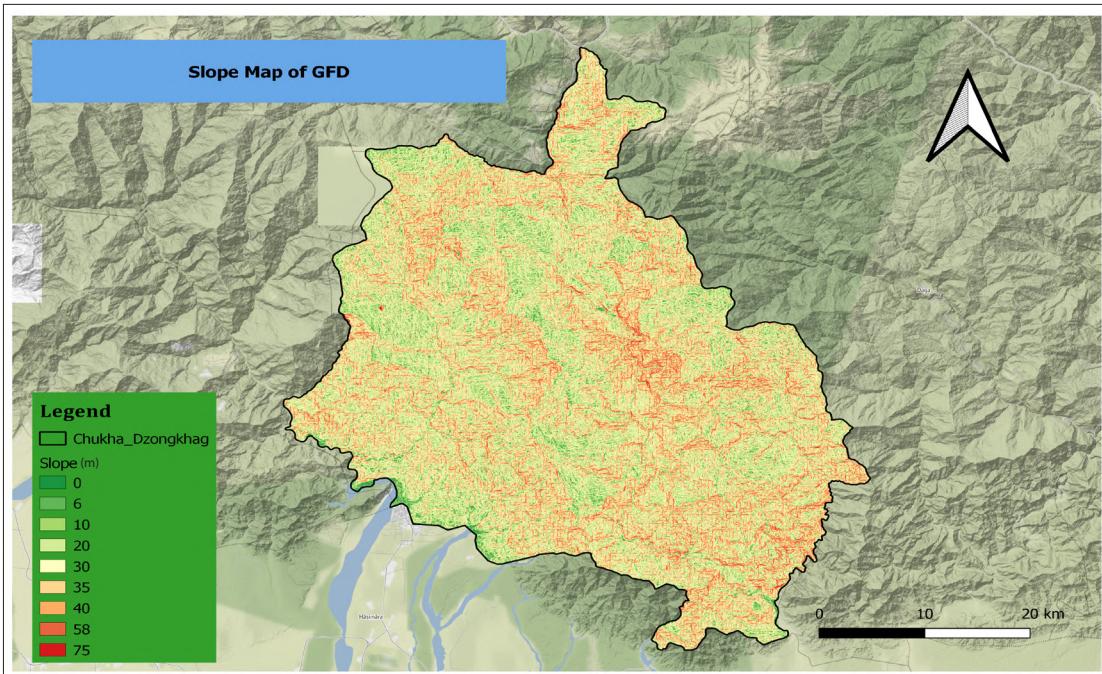

Figure 4: Map showings slope of GFD.

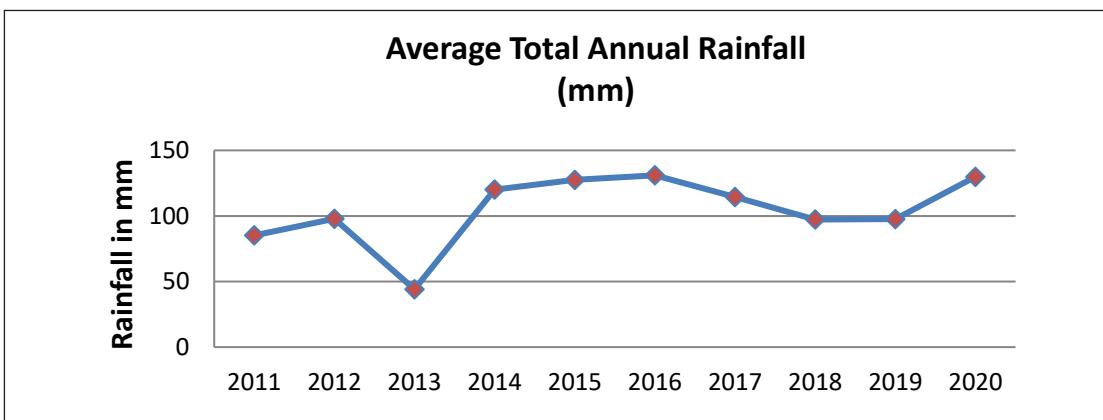

2.2.2 Climate

GFD has an altitudinal range between 150m to 4400masl and the summers in the south are very hot, whereas winters are cold in the north. The climate is mainly subtropical but parts of Chukha have tropical and temperate climate. Annual precipitation ranges from 750 mm in the north to 4000mm in the south(Forest Resource Management Divsion, 2017). The most common form of precipitation is in the form of rain but hailstorms during the late winter and snow in the higher elevations are received annually.

There is no meteorological station installed by the GDF and the weather data for the past 10 years (2011-2020) is obtained from the database of National Centre for Hydrology and Meteorology (NCHM), Thimphu. The maximum precipitation recorded during the month of May, June, July and August (Table 2).

Table 2: Monthly Average Rainfall (mm) of past 10 years.

Months	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Avg. Monthly Rainfall(mm)	14	24	44	81	140	179	366	192	154	48	4	3

**Figure 5: Graph showing Average Total Annual Rainfall (mm)**

The average minimum temperature is 11.3 and the average maximum temperature is 19.3 degree celsius

Table 3: Average monthly minimum and maximum temperature.

Months	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Min.Temp	5	6	7	9	14	14	18	17	17	14	10	7
Max. Temp	13	14	15	17	20	21	24	24	24	23	20	17

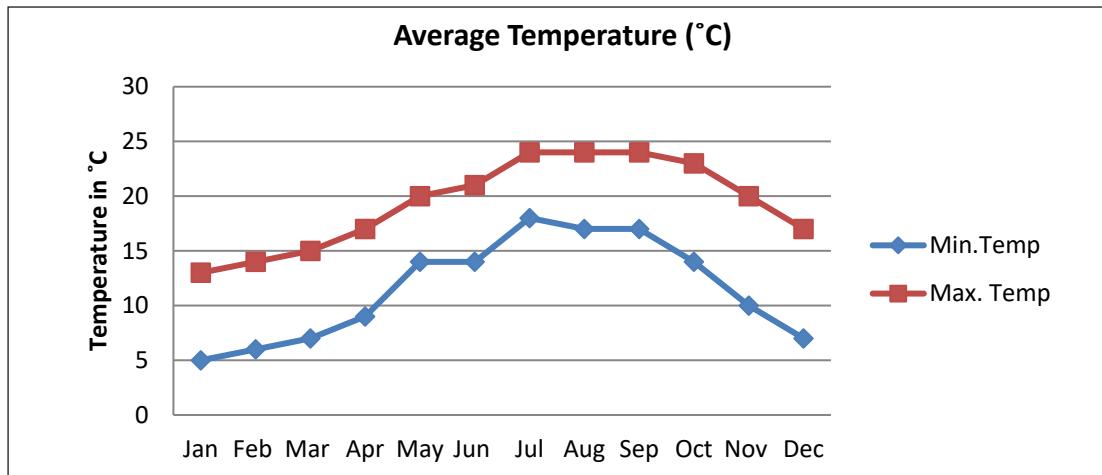

Figure 6: Graph showing average monthly temperature.

2.2.3 Geology and soil

GFD area falls under the tectonostratigraphic zone of upper lesser Himalayan under Phuntsholing formation which belongs to Baxa Group of Rocks (McQuarrie et al., 2013) as shown in the Figure 7 below. The area was formed during the paleozoic period and comprises mainly of folded successions of purple phyllites, quartizite and siliceous limestone. The soil is predominantly sandy loam (90.6%), 8.1% loamy soil and 1.3% sandy soil

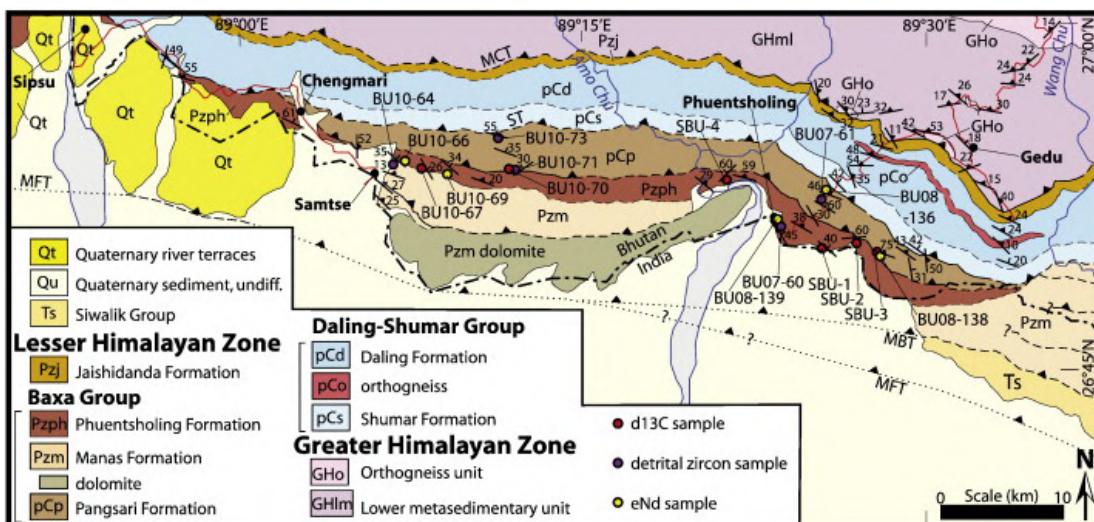

Figure 7: Geological map of South-west Bhutan (McQuarrie et al., 2013).

2.2.4 Hydrology

The entire GFD is the hydrological basin of the two major River Amochhu and Wangchhu which drains into the neighbouring Indian state. The Division area is dissected by many small streams that flows into the Amochhu and Wangchhu River. Most of the streams are seasonal which comes into life only during the rainy seasons. There are few prominent lakes like Shougayla Lake, Lumila Lake and Phaktshoding Lake among various other small water holes and marshes as shown in the Figure 8 below.

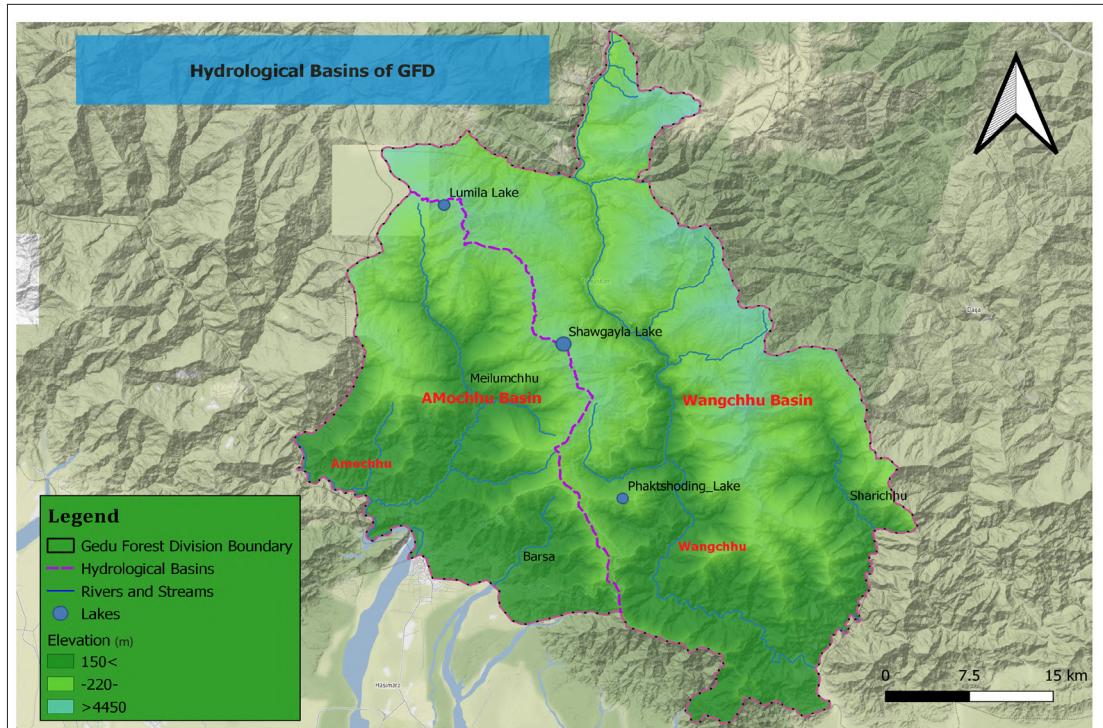

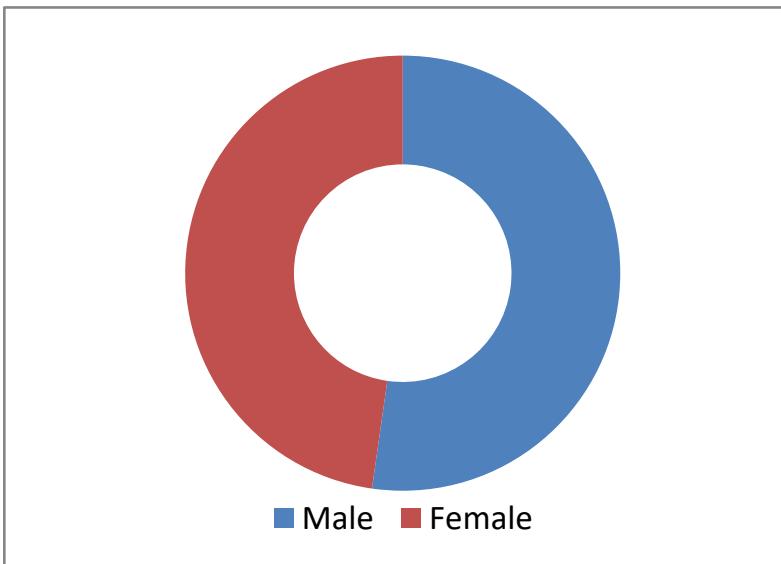

Figure 8: Hydrological basins of GFD.

2.3 Variable site factors

2.3.1 Population and demography

GFD consists of 11 Gewogs which falls under Chukha Dzongkhag and Phuntsholing Dungkhag. There are 36,041 males and 32925 females residing within the Division's jurisdiction(PHCB, 2017, n.d.).

2.3.2 Farming and agriculture

In terms of farmland, GFD is dominated by kamzhing (dryland) where potato, maize, wheat, barley, ginger, chilli and green vegetable are grown. However, chuzhing (wetland) is also found in its lower altitudes. The main sources of rural cash income are oranges and potatoes. However, cardamom and Areca nut also contribute to the cash income. The majority of the people living in the valley are subsistence farmers except in places like Phuntsholing and Pasakha where commercial activities are largely carried out. There are about 1882.87 hectares of wet land, 5653.05 hectares of dry land and 322.19 hectares of orchards under GFD(Forest Resource Management Division, 2017).

2.3.3 Traditional use of forests

The people depend on the forests for supply of forest resources such timber for house building, firewood, fencing poles, bamboo, cane shoots, edible ferns, flag poles and many other non-wood forests products. The major forest resource use in terms of traditional purpose is for house building timber and firewood.

2.3.4 Grazing

Grazing is evident in most of the area particularly in Metakha, Gelling, Bjabcho and Getana gewog. However, people prefer to raise few productive animals rather than herds of local cattle that will greatly reduce pressure on forests and enhanced income of the people. Livestock diversity of GFD is not different from those occurring commonly in most of other Districts of Bhutan. Livestock Population by Types (Chukha Dzongkhag, 2019) is shown in Figure 9.

The fodder species that are most commonly used as fodder for the domestic animals are *Acer laviegatum*, *Amoora wallichii*, *Brassiopsis hainla*, *Castanopsis tribuloides*, *Eurya acuminate*, *Ficus auriculata*, *Ficus neriifolia*, *Ficus semicordata*, *Morus laviegatum* and many other species.

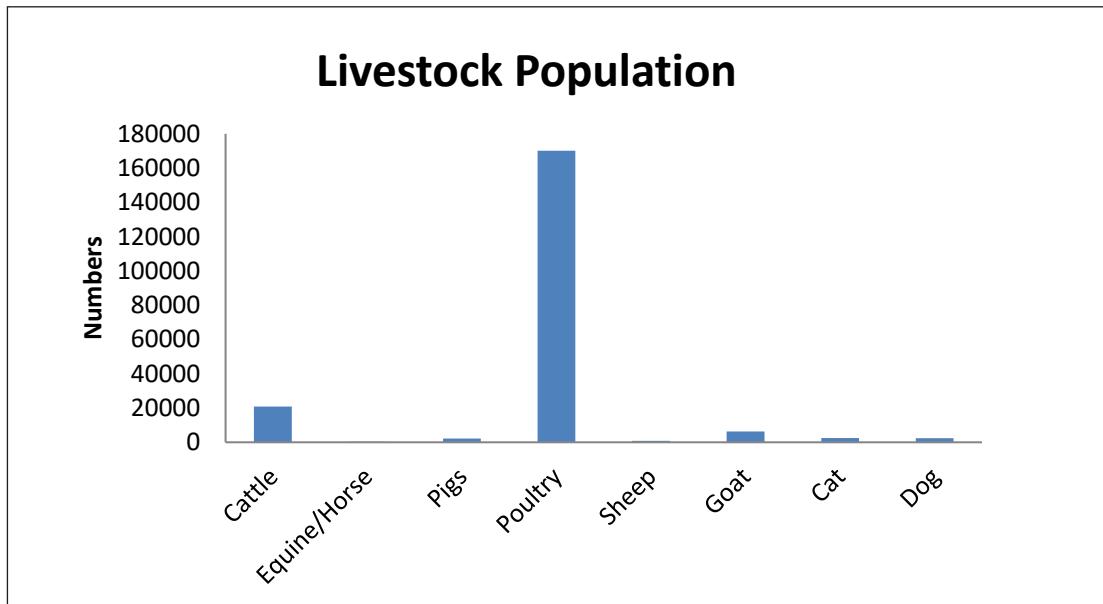

Figure 9: Types of livestock under GFD.

2.3.5 Forest fire

Forest fire is not a major problem in GFD as large extent of the area is covered by broadleaved forest and most of the areas remain moist under cloud forest. However, some incidences of forest fire are frequently occurring in the northern parts of GFD where there is conifer forest. The major area of concern in terms of fire although less compared to other dzongkhag is in Chapcha gewog where acres of conifer forests are damaged due to forest fire particularly in winter seasons.

2.3.6 Pest and diseases

There is no much history of report on pest and diseases apart from bark beetles infestation in conifer forest in Chapcha gewog area, affect of Champ defoliators in southern parts of GFD and teak shot hole in Samphelling and Darla gewog.

2.3.7 Non-Timber Forests Products

Non timber forest products (NTFP) are important resources to the people of GFD where people sell to make their living in addition to agriculture practices for cash income. The major species(Dorji et al., 2018) of NTFP found in GFD that are either used for domestic consumption or traded are as shown in Table 4.

Table 4: List of NTFP

Sl. No.	Species	Part used/Uses
NTFP used as Food		
1	<i>Cantharellus cibarius</i>	Entire plant
2	<i>Diplazium spp.</i>	Tender parts
3	<i>Elastotema lineolatum</i>	Entire part
4	<i>Girardinia diversifolia</i>	Bark
5	<i>Laportea terminalis</i>	Flower bud and young leaves
6	<i>Musa spp.</i>	Flower bud
7	<i>Plectocomia himalayana</i>	Young shoots and mature stem
8	<i>Dioscorea spp.</i>	Tuber
Medicinal Plants		
9	<i>Acorus calamus</i>	Root/Tuber
10	<i>Artemesia spp.</i>	Leaves and flower buds
11	<i>Astilbe rivularis</i>	Roots
12	<i>Cassia spp.</i>	Leaves
13	<i>Ficus semicordata</i>	Figs
14	<i>Rhus chinensis</i>	Fruit
15	<i>Rubia cordifolia</i>	All parts
16	<i>Rubus ellipticus</i>	Root
Cane and Bamboos		
17	<i>Calamus acanthopathus</i>	Young shoots and mature stems
18	<i>Plectocomia himalayana</i>	Young shoots and mature stems
19	<i>Cephalostachyum spp.</i>	Young shoots and culms
20	<i>Chimonobambusa spp.</i>	Culms
21	<i>Bambusa nutans</i>	
Other plants used		
22	<i>Cinnamomum spp.</i>	Leaves
23	<i>Cupressus spp.</i>	Leaves and twigs
24	<i>Daphne spp.</i>	Bark

Sl. No.	Species	Part used/Uses
25	<i>Edgeworthia spp.</i>	Bark
26	<i>Piper spp.</i>	Fruits
27	<i>Thysaenolaena latifolia</i>	Inflorescence
28	<i>Xanthoxylum spp.</i>	Fruits

2.4 Resource allocation

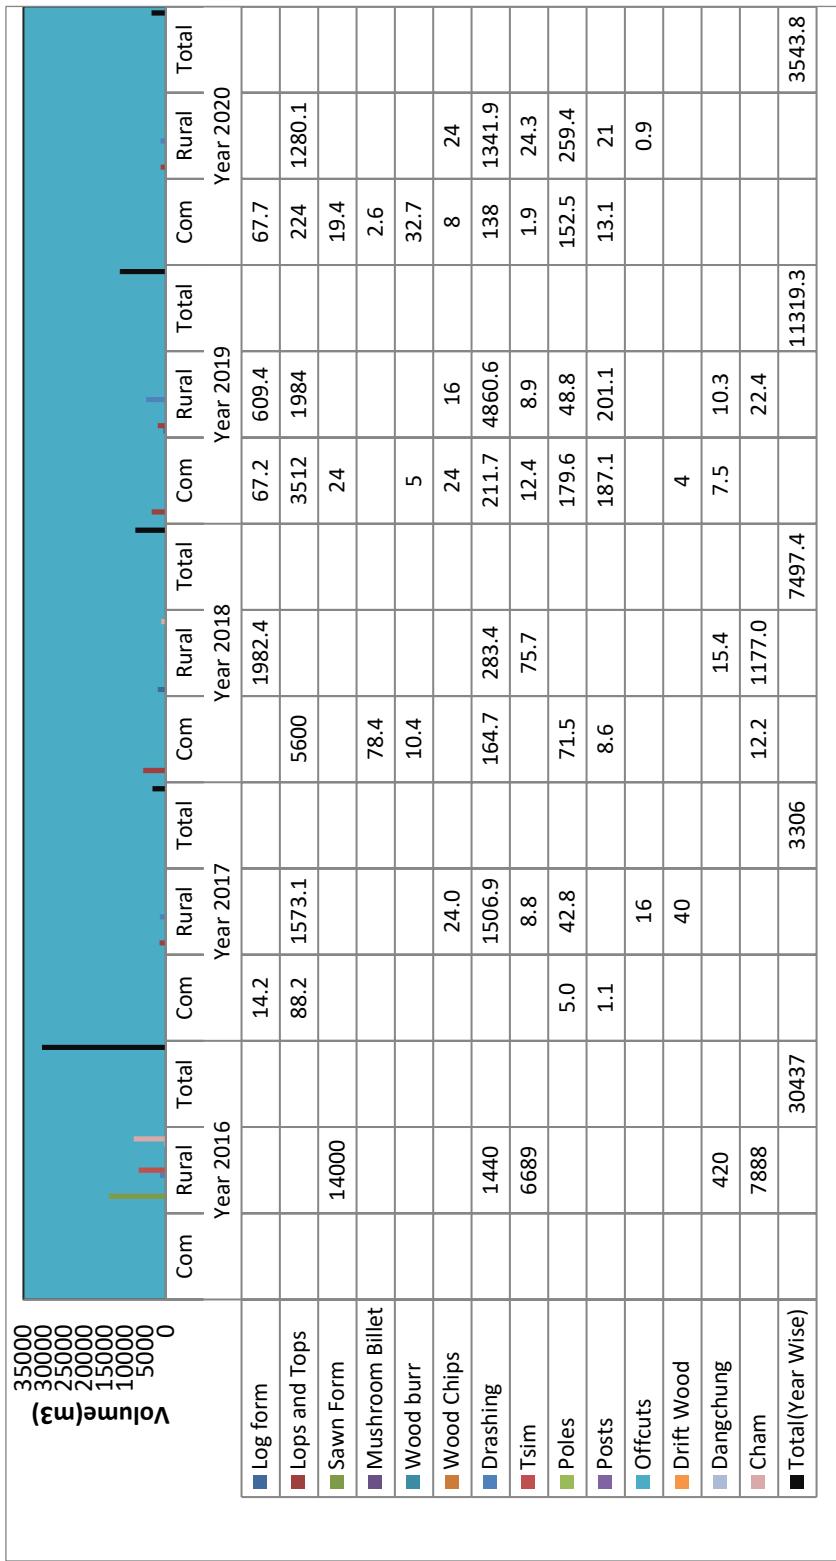

Forest resources are managed scientifically through establishment of various forest management regimes like Forest Management Unit, Local Forest Management Areas, Community Forest, Non-wood Forest Products Groups, Payment for Environmental Services, etc for allocation of forestry resources for commercial and rural use, and for providing ecosystem services

The resource allocation is done mostly through single tree selection system and patch cut system in Forest Management Units (Dorji et al., 2018).

2.4.1 Rural Timber and Commercial Timber allotment trends

Rural house building timber is allocated based on the eligibility as per Forest and Nature Conservation Rules and Regulations 2017 and amendments annually. Similarly, commercial timber is allotted to the people through Natural Resource Development Corporation Limited (NRDCL) and Association of Wood Based Industries(AWBI) as per the Timber distribution modality of the Department of Forest and Park Services.

The trend in the commercial and rural timber allocation within GFD for past five years is given in Table 5.

Table 5: Trend in commercial and rural timber allotment under GFD.

2.4.2 Non-Timber Forest Products (NTFP)

Non-timber forest product IS one important biological resource that is used by the people in different forms such as edible mushrooms, medicinal plants, wild vegetables, bamboos and canes among many others. NTFP's are allotted to the people by forming groups as well as to the individual where there is no groups formed based on the resource assessment. Table 6 shows the NTFP allotment over the past three years (2018 to 2020) by the GFD.

Table 6: NTFP allotted by GFD over past 3 years.

NTFP Product type	2018		2019		2020	
	Qty	Unit	Qty	Unit	Qty	Unit
<i>Calamus</i> sp.					4000	Number
Cane shoot (<i>Plectocomia himalayana</i>)	3650	Number	2960	Number	800	Truckload
Daphne bark	7105	Kg	4885	Kg	3480	Kg
<i>Juniperus</i> sp.	3	Truckload	10	Truckload	4	Truckload
Large Bamboo	3512	Number	3002	Numbers	1849	Number
Pine needle	4	Truckload	4	Truckload	1	Truckload
<i>Rubia cordifolia</i>	800	Kg	70	Kg	10	Kg
Small Bamboo (<i>Yushania</i> sp.)	50123	Bundle	7980	Number	20111	Numbers
<i>Thysanolaena latifolia</i> (Broom grass)	54	Bundle	40	Bundle		
Wildlings	255	Number				
Wood burrs			90	Number		
<i>Rhododendron lepidotum</i>					250	Numbers

Rufous-necked hornbill
(Aceros nipalensis)

3. Methods of Biodiversity Assessment

The baseline biodiversity assessment was carried through both primary data (survey) and secondary data (literature review) assimilation. A detailed study plan was developed to guide the field activities (particularly for floristic study) and accomplish the Baseline Biodiversity Report in the span of over one year. The study was conducted for a period of 13 months (November 2020 to November 2021) in the sampled biodiversity monitoring grids with two grids within an interval of 500 masl along the elevation gradient of GFD.

3.1 Flora and Normalized Difference Vegetation Index

Flora Assessment Methods

The floral survey was conducted as per Biodiversity Monitoring and Social Survey Protocol of Bhutan, 2020 (DoFPS, 2020) in the sampled Biodiversity monitoring Grids under GFD. Biodiversity monitoring grids are the 4x4 km grid cell spread across the country and in GFD the survey was conducted in 17 sampled grids. The grids were systematically sampled along the elevation gradient with two grids selected over every 500 masl elevation range.

A total of 17 plots were laid along the altitudinal gradient as shown in Figure 10. A plot size of 20x20 m for trees, 2x2 m for Shrubs, and herbs were laid to document the flora in sample grids by entering about 200 m into the grid from its boundary. Orchids, bamboos and weed are recorded from the opportunistic surveys and from that of literature review.

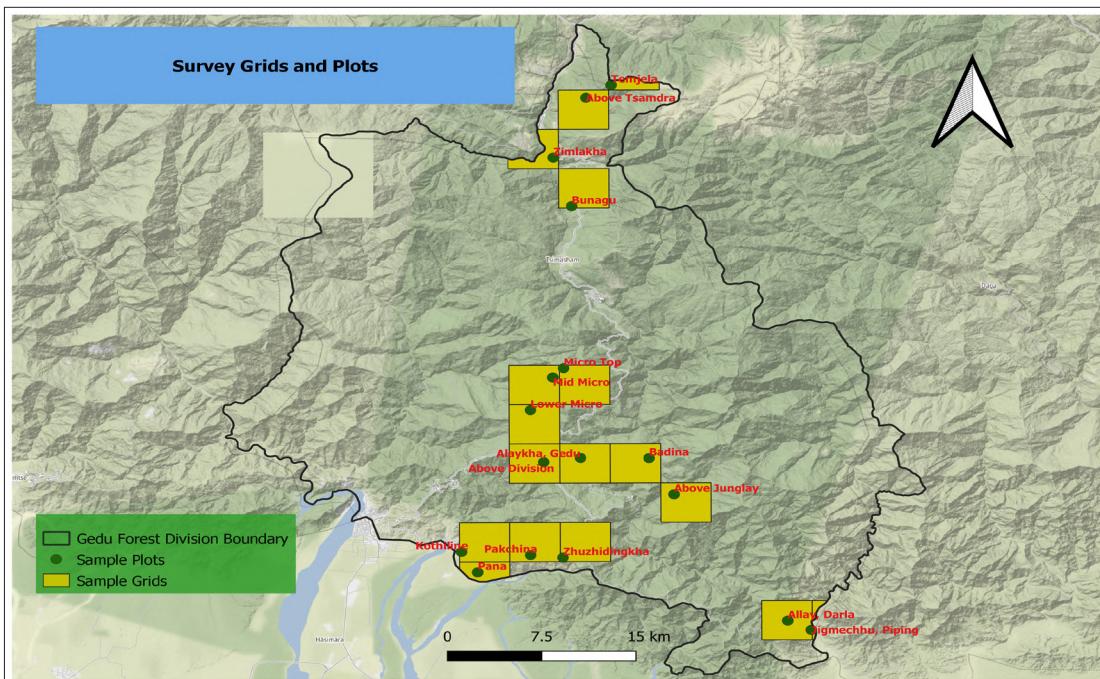

Figure 10: Map showing Vegetation Survey Sample Plots.

Normalized Difference Vegetation index

“Normalized Difference Vegetation Index (NDVI) quantifies vegetation by measuring the difference between Near-Infrared (which vegetation strongly reflects) and red light (Which vegetation absorbs)”. The NDVI ranges from -1 to +1 and it is a standard way to measure healthy vegetation. When there is higher NDVI value, there is healthier vegetation and when there is lower value, there is less or no vegetation cover. Average annual NDVI of two decades (2000 to 2020) as per the Landsat Image (30m) for Gedu Forest Division with trendline (Figure 11). Accordingly, the graph shows that there is increase in vegetation cover under GFD over the past years on an average.

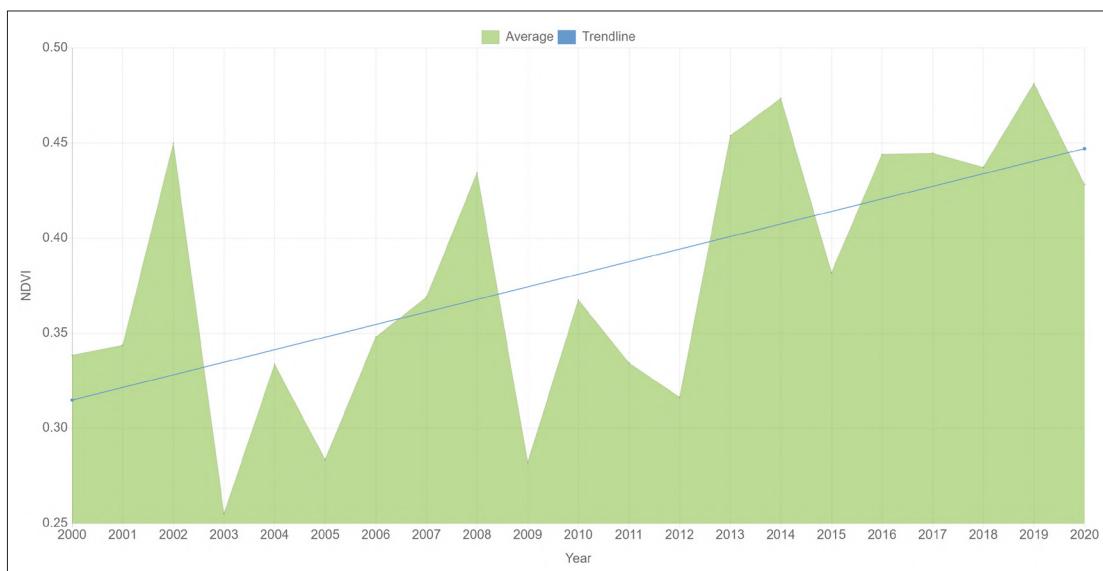

Figure 11: Graph showing NDVI of GFD(FAO, 2020).

3.2 Avifauna

Bhutan has a rich bird species with about 747 birds reported in the country which includes 18 endemic bird species of eastern Himalayas (Birdlife International, 2017). Avifauna diversity in Bhutan is attributed to its wide range of elevation from as low as 80 masl to 7700 masl (DoFPS, 2020).

The avifauna data assimilation is done mostly through call records, observation in field and pictorial evidences by the staff of GFD and birders of Bhutan birdlife society.

3.3 Mammals

The mammals list for this report are obtained from the past National Tiger survey, (2014-2015) National Elephant survey (2016) and Red Panda survey (2021), as Camera trapping was not conducted for this particular study. The images from earlier surveys were used to report the number of mammals species recorded under GFD. However, the record of bat species is based on the literature review as no separate survey was conducted to document bat species specifically.

3.4 Fishes

The baseline data for fish were compiled from the reports of Capture Fishery Management Plans of Drukdingsa and Sarphu Village (NRDCR&LF, 2016) and also from the aquatic survey report for Amocchu Township Project by Bhutan Ecolab Services (BES, 2020).

3.5 Butterflies

Butterflies and moths are widely distributed and found in diverse habitats such as grasslands, agricultural fields, conifer forests, broadleaved forests and scrubland. The survey was conducted with transects along the highways and farm roads. The survey plot is laid every 300m length of transect and pictures of the butterflies were taken for documentation and identification. The pictures were then identified through literature search and with help of expert knowledge. The survey was conducted jointly by Ugyen Wangchuk Institute for Conservation and Environmental Research and Gedu Forest Division staff.

3.6 Herpetofauna

The assessment on the herpetofauna under GFD was carried out through the literature review, documentation of species opportunistically during other field works and during the human-snake conflicts.

3.7 Human Wildlife Conflict

Humans have lived with nature and are intrinsically linked with nature. Human and wildlife lived together in conflict or coexistence and are bound to cause both negative and positive impacts. However it is a problem when there are negative impacts due to interaction of human and wild animals. The human-wildlife conflict occurs when human and wildlife compete for food and space whereby their behaviour affects negatively to both(Karanth and Kudalkar, 2017). The loss of life, property, livestock and agricultural crops to wildlife is of great loss to the communities and often lead to retaliatory killings thereby leading to loss of biodiversity(Sharma et al., 2020). Human-wildlife conflict is widespread across world and so is the case in Bhutan and its twenty dzogkhag. Similarly human-wildlife conflicts are reported annually within Gedu Forest Division as well.

To understand the Human-Wildlife conflicts under Gedu Forest Division, the past three years Human-Wildlife conflict area point data (2018-2020) were gathered and analyzed for Human-Wildlife Hotspot Mapping. The each point data of Crop depredation and Livestock depredation were assigned randomly with magnitude range of 1-10. The predictor variables such as topography (Digital Elevation Model), climate (precipitation and temperature, land use and anthropogenic factors were used. The raster data of predictor variables along with point data were analysed in MaxEnt software and predicted the Human-Wildlife hotspots under GFD.

Cattle herd
Bongo Gewog

4. Biological Diversity in GFD (Results from the assessment)

The baseline biodiversity assessment result is based on designed survey, Literature review and through opportunistic survey data during other field works. The Table below shows the summary of total species recorded under Gedu Forest Division.

Table 7: Number of species under different Taxa/Floral Live forms.

Sl. No.	Taxa/Floral Live Form	Number of Species
1	Trees	175
2	Shrubs	109
3	Herbs	46
4	Bamboos	8
5	Weeds	57
6	Mammals	28(excluding bats)
7	Avifauna	477
8	Orchids	116
9	Butterflies	162
10	Fish	43
11	Crabs (Crustaceans)	4
12	Bats	10
13	Herpetofauna (Reptiles and Amphibians)	11

4.1. Flora

The list of trees, shrubs, herbs and orchids are reported based on the survey conducted in the sampled grids and sampled plots under Gedu Forest Division. There are 176 species of trees, 109 species of shrubs, 46 species of herbs and 116 species of orchid. However the species of orchids are recorded opportunistically and through literature review. The checklist of trees, shrubs, herbs, orchids, Bamboos and Weeds are as presented in Appendix I, Appendix II, Appendix III, Appendix IV, Appendix V and Appendix VI respectively.

4.2 Avifauna

Gedu Forest Division has 477 species of birds recorded, which is compiled from Birdlife society of Bhutan and through opportunistic surveys during various field work conducted by the Divisions staff. However, there is no photographic record for all these recorded species due to lack of database management system previously. The list of bird species observed and/or heard are listed in Appendix VII.

Threatened species birds as per International Union for Conservation of Nature (IUCN) that are found in GFD are *Apus acuticaudata* (Vulnerable) and *Ardea insignis* (Critically endangered).

4.3 Mammals

Mammals

The list of mammal species obtained from the camera trap images of various national survey like National Tiger Survey, National Elephant survey and Red panda survey for GFD is as shown in Appendix VIII. There are 28 species of mammals excluding bat species in GFD. Threatened species as per IUCN red list are *Ailurus fulgens*, *capricornis sumatraensis*, *Cuon alpinus*, *Elephas maximus*, *Neofelis nebulosa*, *Panthera pardus*, *Panthera tigris* and *Ursus thibetanus*.

Bats

Bats are mammal from the order Chiroptera and the true fliers among the mammals with its forelimb adapted as wings. There are almost 1411 species of bats in the world and are grouped under fruit bats and insectivorous bats. Among, 124 species of bats reported from south Asia, 65 species are expected within Bhutan, which accounts to almost 33% of the mammalian species in Bhutan(Srinivasulu et al., 2010).

The list compiled through literature review of bats under GFD suggest that there is 10 recorded species of bats and Gedu Forest Division (same jurisdiction with Chukha District) is the hotspot for bats species (Tshering et al., 2020). The list of bat species reported from the past studies is as shown in Appendix IX.

4.4 Fishes

There are 43 species of fishes recorded from Wangchu, Amochhu and Melumchhu (Dungna) based on (BES, 2020; NRDCR&LF, 2016). The list of fishes found in GFD is as shown in Appendix X.

4.5 Butterflies

Out of 760 species of Butterflies in Bhutan(Wangchuk et al., 2021), there are 162 species of Butterflies recorded under Gedu Forest Division through opportunistic survey with pictorial evidence by team from UWICER and Gedu Forest Division. The list of butterflies recorded is as show in Appendix XI.

4.6 Herpetofauna

The checklist of herpetofauna under GFD is very poor at the moment and needs further documentation. Currently, the checklist shows only about 28 species and 4 species of crustaceans as shown in Appendix XII.

4.7 Human-Wildlife Conflict

The results of the prediction of the Human-Wildlife conflict based on the point data of Human-wildlife conflict area and predictor variables are as shown in figures 11, 12 7 13. The hot spot for crop depredation in spread across the division but more concentrated in the southern gewog like samphelling. However, livestock depredation possibility is more in higher elevations which could be mainly due to free ranging cattle herding practices in Chapcha, Getana, Bjachho, Geling, Darla and Bongo.

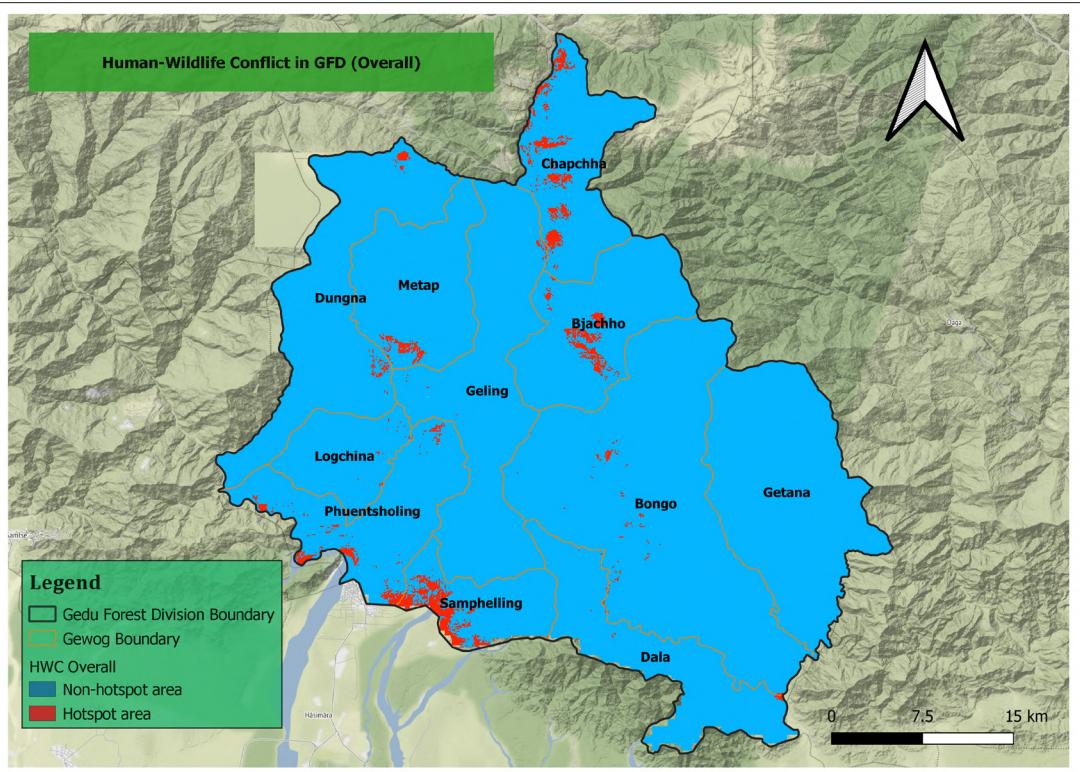

Figure 12: Predicted HWC hotspot areas.

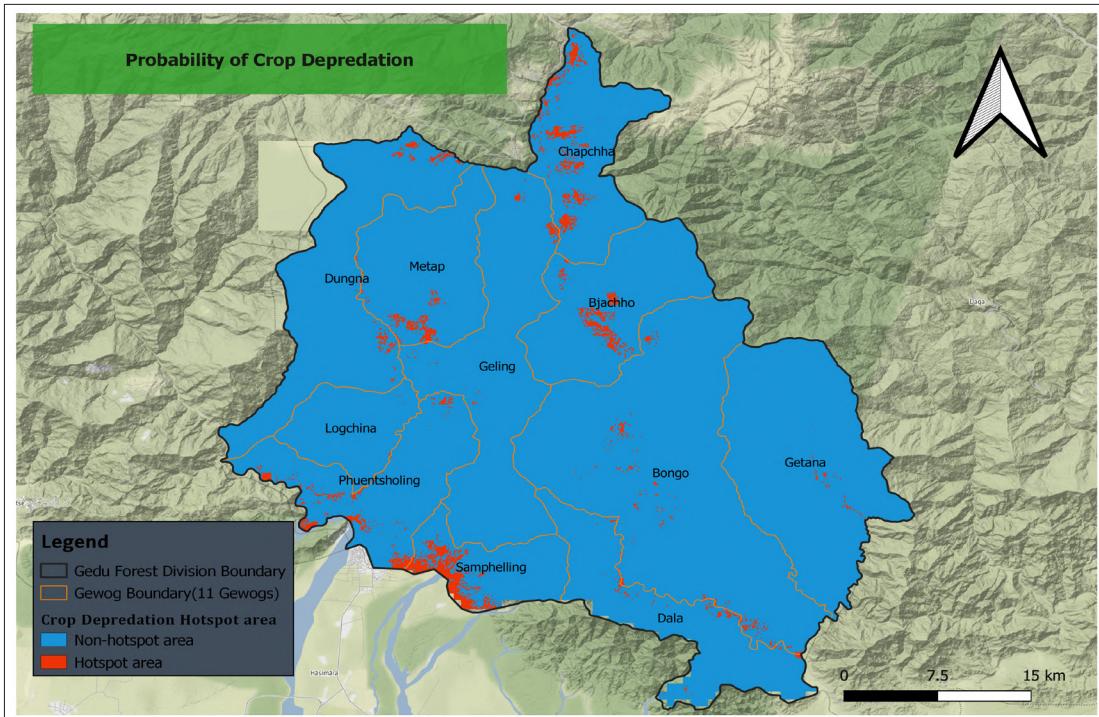

Figure 13: Probability of crop depredation.

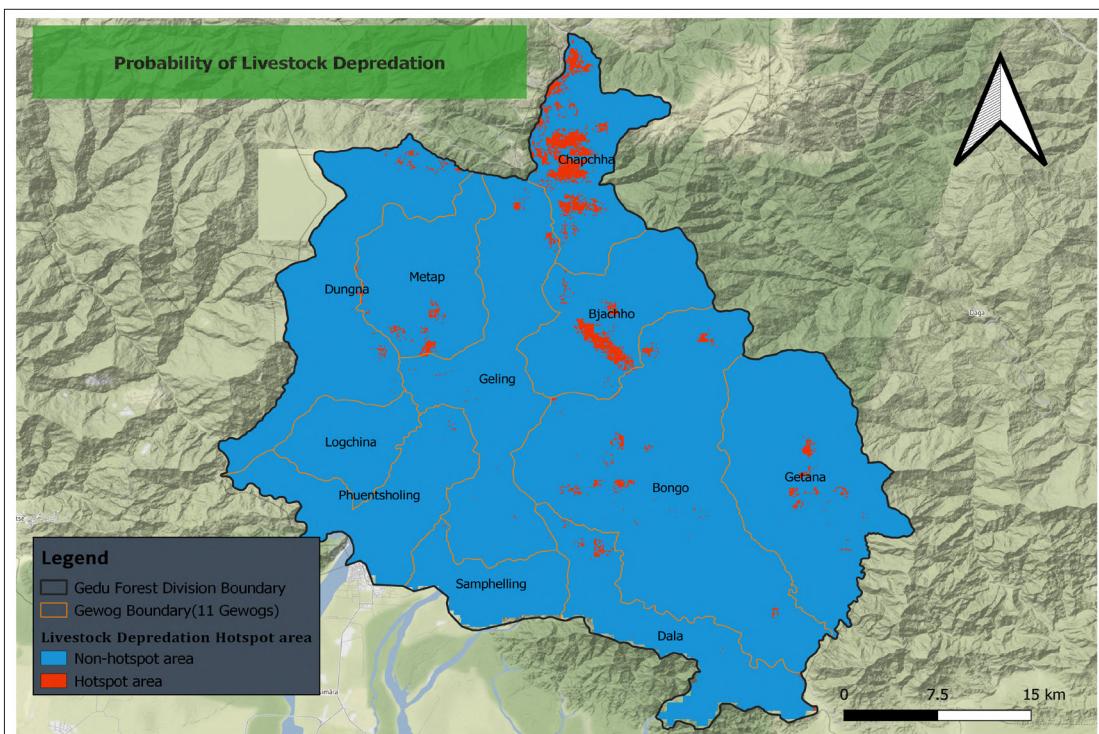

Figure 14: Probability of livestock depredation.

5. Threats to the Biodiversity

The list of possible major threats but not limited to under GFD to the biodiversity conservation are as follows:

- i. Land use Conversion
- ii. Forest Fire
- iii. Timber and NWFP harvesting, and poaching
- iv. Unsustainable agriculture practices
- v. Human Wildlife conflict
- vi. Invasive species
- vii. Pollution
- viii. Climate change
- ix. Population

7. List of Research activities conducted in GFD.

Sl. No.	Title	Author(s)	Year published
1	Grazing Management in Broadleaved Forest	(Norbu, 2002)	2002
2	Freshwater Brachyura Crab Diversity Assessment in Chukha Dzongkhag (Bsc. Thesis)	(Nagphel, 2015)	2015
3	Assessment of Amphibian Diversity in Three Gewogs of Chukha Dzongkhag(Bsc. Thesis)	(Tshering, 2016)	2016
4	First record of the Asiatic Brush-tailed Porcupine <i>Atherurus macrourus</i> Linnaeus, 1758 (Mammalia: Rodentia: Hystricidae) from western Bhutan	(Dhendup and Dorji, 2017)	2017
5	Assessment of Land Use/Cover Change and Urban Expansion Using Remote Sensing and GIS: A Case Study in Phuentsholing Municipality, Chukha, Bhutan	(Chimi et al., 2017)	2017
6	Camera-trap records of small carnivores from Gedru Territorial Forest Division, Bhutan	(Dhendup and Dorji, 2018a)	2018
7	Occurrence of six felid species outside protected areas in Bhutan	(Dhendup and Dorji, 2018b)	2018
8	Change in forest structure and diversity after the human disturbances in the cool montane evergreen broad-leaved forest	(Wangda et al., 2009)	2009

Sl. No.	Title	Author(s)	Year published
9	Bat (Mammalia: Chiroptera) diversity, dominance, and richness in the south western region of Bhutan with three new records for the country	(Tshering et al., 2020)	2020
10	The first record of Medog Gliding Frog <i>Rhacophorus translineatus</i> Wu, 1977 (Anura: Rhacophoridae) from Chhukha District, Bhutan	(Lhendup and Koirala, 2021)	2021

7. Conclusions

7.1 Conclusion

The baseline biodiversity report is prepared through survey in sampled biodiversity monitoring grids of GFD along the altitudinal gradient. Opportunistic survey and literature review have documented numerous species of flora and fauna under different taxa that are recorded within GFD. However, the species reported in the checklist are under reported especially the floral species due to survey in only 17 grids out of 113 biodiversity monitoring grids under GFD.

Human-wildlife conflicts, various site factors, both permanent and variable site factors that contribute to the biodiversity conservation and various threat that affects the biodiversity and are likely to affect in future were also looked into in this report. The probability of human-wildlife conflicts hotspot areas are also analyzed through the point data of the human-wildlife conflict occurrence data. Therefore, this report will be of great foundations for the listing of flora and fauna under Gedu Forest Division.

7.2 Management recommendations

- i. The species of flora and fauna, particularly flora needs further attention to document the diverse species found in GFD and with pictorial/specimen evidences for both flora and fauna.
- ii. The critical habitats for the endangered species needs to be identified, protected and conserved for the long term survival of the species.
- iii. The Human-Wildlife conflict areas as per the hotspot mapping needs to be intervened and provide mitigation measures for harmonious co-existence of the human and wild animals. However, prioritization should be based on more data collection of human-wildlife conflicts over the longer duration and more all the species, as mostly carnivore species records are only maintained or reported with the hope of compensation.
- iv. The threats to the biodiversity need to be addressed through strengthened SMART patrols.

104	<i>Cethosia cyane</i>	Leopard Lacewing	Nymphalidae
105	<i>Zizina ots</i>	Lesser Grass Blue	Lycaenidae
106	<i>Cepora nadina</i>	Lesser Gull	Pieridae
107	<i>Graphium macareus</i>	Lesser Zebra	Papilionidae
108	<i>Lethe sura</i>	Lilacfork	Nymphalidae
109	<i>Cigaritis lohita</i>	Long-banded Silverline	Lycaenidae
110	<i>Euploea algae</i>	Long-branded Blue Crow	Nymphalidae
111	<i>Megisba malaya</i>	Malayan	Lycaenidae
112	<i>Cyrestis cocles</i>	Marbled Map	Nymphalidae
113	<i>Orsotriana medus</i>	Medus Brown	Nymphalidae
114	<i>Dodona ouida</i>	Mixed Punch	Riodinidae
115	<i>Catopsilia pyranthe</i>	Mottled Emigrant	Pieridae
116	<i>Eurema andersonii</i>	One-spot Grass Yellow	Pieridae
117	<i>Athyma cama</i>	Orange Staff Sergeant	Nymphalidae
118	<i>Bibasis sena</i>	Orange-tail Awl	Hesperiidae
119	<i>Colias erate</i>	Pale Clouded Yellow	Pieridae
120	<i>Neocheritra fabronia</i>	Pale Grand Imperial	Lycaenidae
121	<i>Pseudozizeeria maha</i>	Pale Grass Blue	Lycaenidae
122	<i>Papilio paris</i>	Paris Peacock	Papilionidae
123	<i>Junonia almana</i>	Peacock Pansy	Nymphalidae
124	<i>Neptis cartica</i>	Plain Sailer	Nymphalidae
125	<i>Danaus chrysippus</i>	Plain Tiger	Nymphalidae
126	<i>Anthene lycaenina</i>	Pointed Ciliate Blue	Lycaenidae
127	<i>Niphanda cymbia</i>	Pointed Pierrot	Lycaenidae
128	<i>Stibochiona nicea</i>	Popinjay	Nymphalidae
129	<i>Euthalia monina</i>	Powdered Baron	Nymphalidae

Sl. No.	Scientific Name	Common Name	Family
130	<i>Leptosia nina</i>	Psyche	Pieridae
131	<i>Abisara fleygas</i>	Punchinello	Riodinidae
132	<i>Heliophorus epicles</i>	Purple Sapphire	Lycaenidae
133	<i>Delias pasithoe</i>	Red -base Jezebel	Pieridae
134	<i>Cethosia biblis</i>	Red Lacewing	Nymphalidae
135	<i>Delias descombesi</i>	Red-spot Jezebel	Pieridae
136	<i>Lethe bhairava</i>	Rusty Forester	Nymphalidae
137	<i>Phaedyma columella</i>	Short-banded Sailer	Nymphalidae
138	<i>Rapala manea</i>	Slate Flash	Lycaenidae
139	<i>Pelopidas mathias</i>	Small Banded Swift	Hesperiidae
140	<i>Neptis miah</i>	Small Yellow Sailer	Nymphalidae
141	<i>Elymnias malelas</i>	Spotted Palmfly	Nymphalidae
142	<i>Tagiades menaka</i>	Spotted Snow Flat	Hesperiidae
143	<i>Athyma selenophora</i>	Staff Sergeant	Nymphalidae
144	<i>Parnara guttatus</i>	Straight Swift	Hesperiidae
145	<i>Lethe verma</i>	Straight-banded Treebrown	Nymphalidae
146	<i>Tagiades gana</i>	Suffused Snow Flat	Hesperiidae
147	<i>Neptis soma</i>	Sullied Sailer	Nymphalidae
148	<i>Graphium agamemnon</i>	Tailed Jay	Papilionidae
149	<i>Dodona eugenes</i>	Tailed Punch	Riodinidae
150	<i>Charaxes bernardus</i>	Tawny Rajah	Nymphalidae
151	<i>Eurema blanda</i>	Three-spot Grass Yellow	Pieridae
152	<i>Gandaca harina</i>	Tree Yellow	Pieridae
153	<i>Flos adriana</i>	Variegated Plushblue	Lycaenidae
154	<i>Jamides pura</i>	White Cerulean	Lycaenidae
155	<i>Parasarpa dudu</i>	White Commodore	Nymphalidae
156	<i>Gerosis sinica</i>	White Yellow-breasted Flat	Hesperiidae
157	<i>Euthalia telchinia</i>	White-bordered Blue Baron	Nymphalidae
158	<i>Loxura atymnus</i>	Yamfly	Lycaenidae
159	<i>Delias agostina</i>	Yellow Jezebel	Pieridae
160	<i>Ixias pyrene</i>	Yellow Orange Tip	Pieridae
161	<i>Charaxes marmax</i>	Yellow Rajah	Nymphalidae
162	<i>Polytremis eltola</i>	Yellow-spot Swift	Hesperiidae

Appendix XII: Checklist of Herpetofauna of GFD

SL. No.	Scientific Name	Common Name
Reptiles		
1	<i>Elaphe cantoris</i>	Eastern Trinket snake
2	<i>Trachischium tenuiceps</i>	Yellow belly worm eating snake
3	<i>Bungarus bungaroides</i>	Himalayan krait
4	<i>Trimeresurus albolabris</i>	Green pit viper
5	<i>Trachischium monticola</i>	Mountain worm eating snake
6	<i>Herpetoreas platyceps</i>	Himalayan keelback
7	<i>Daboia russelli</i>	Russells Viper
8	<i>Ovophis monticola</i>	Mountain pit viper
9	<i>Oligodon taeniolatus</i>	Russell's kukri
10	<i>Gloydius himalayanus</i>	Himalayan lance-headed pit viper
11	<i>Indotyphlops braminus</i>	Brahminy blind snake
12	<i>Python molurus</i>	Rock Python
13	<i>Blythia reticulata</i>	Blyths reticulate snake
14	<i>Gekko gecko</i>	Tokay Gecko
Amphibians		
1	<i>Amolops mantzorum</i>	Mouping sucker frog
2	<i>Amolops cf. himalayanus</i>	Himalaya cascade frog
3	<i>Rhachophorus maxima</i>	
4	<i>Rhacophorus translineatus</i>	
5	<i>Xenophrys parva</i>	
6	<i>Hylarana cf. aurantica</i>	
7	<i>Xenophrys cf. major</i>	
8	<i>Nanoran liebighi</i>	
9	<i>Hoplobatrachus tigerinus</i>	Indian Bullfrog
10	<i>Amolops cf. ricketti</i>	
11	<i>Rachophorus maximus</i>	
12	<i>Duttaphrynus melanostictus</i>	Asian Common Toad
13	<i>Duttaphrynus cf. stomaticus</i>	
14	<i>Bufo cf. stuartii</i>	

SL. No.	Scientific Name	Common Name
Crustaceans		
1	<i>Himalayapotamon atkinsonianum</i>	
2	<i>Himalayapotamon emphysetum</i>	
3	<i>Potamiscus aikkimensis</i>	
4	<i>Meydelliathelphsa edentula</i>	

Appendix XIII: Selected images of floral species under GFD

Oberonia acaulis

Dendrobium eriiflorum

11.10.2020 10:58

Henckelia urticifolia

23.04.2021 09:04

Rhododendron kesangiae

31.12.2020 11:37

Leucoseptum cannum

18.05.2021 12:38

Viburnum nervosum

Aphanamixis polystachya

Primula bracteosa

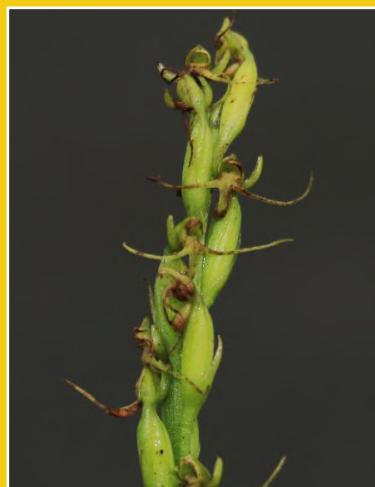

Primula scapigera

Dendrocalamus sikkimense

Wightia speciosissima

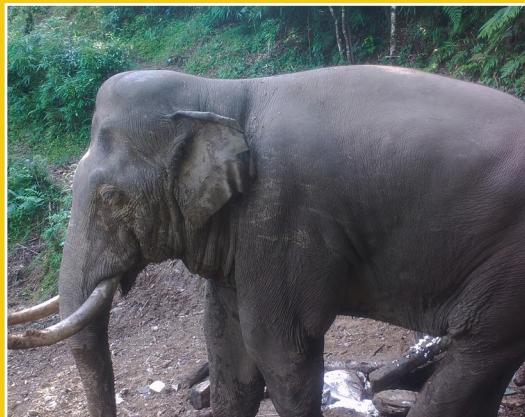

Peristylus aristatus

Appendix XIV: Selected images of faunal species under GFD

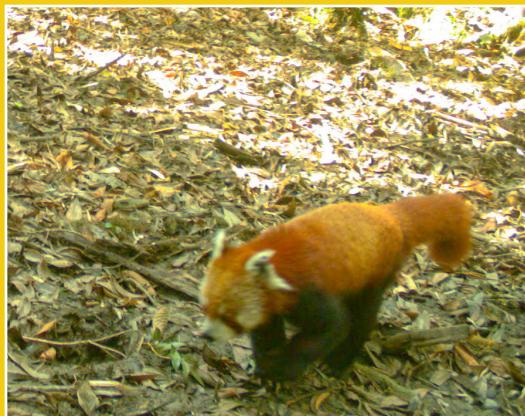

Panthera tigris

Elephas maximus

Capricornis sumatraensis

Ailurus fulgens

Ursus thibetanus

Bubulcus ibis

26. 06. 2021 17:05

Myophonus caeruleus

19. 05. 2021 11:03

Blyth's Reticulate snake

Pantoporia hordonia

Black Panther

Cuon alpinus

Papilio polyctor
