## **LOCAL FOREST MANAGEMENT PLAN**

**FOR  
AREAS OUTSIDE FMU SYSTEM  
GETENA GEWOG**

## **CHUKHA DZONGKHAG**

## **Period of the Plan: 01 JULY 2020 TO 31 JUNE 2030**

**PREPARED BY**

Pema Gyeltshen, Sr. Forest Ranger II.  
Gedu Forest Division  
Gedu

## **AUTHORITY FOR PREPARATION, REVISION AND APPROVAL**

### **PERIOD OF THE PLAN**

This Plan is valid for the period of 10 years from 1<sup>st</sup> July 2020 to 30<sup>th</sup> June 2030.

### **AUTHORITY FOR PREPARATION, REVIEW AND APPROVAL**

The authority for preparation of this plan was given to the Samdrup Jongkhar Territorial Division, Department of Forests and Park Services, Ministry of Agriculture and Forests, Royal Government of Bhutan.

### **APPROVAL**

This plan was reviewed and recommended for implementation by Forest Resources Management Division, Department of Forests and Park Services (DoFPS) and approved by the Honorable Secretary, Ministry of Agriculture and Forests, Royal Government of Bhutan.

**Prepared by**

Sangay Dorjee

Divisional Forest Office, Samdrup Jongkhar

## **1. BACKGROUND**

Scientific management of forests in Bhutan started in 1965 with the preparation of the first management plan. However the sustainable management of forest using scientific principles has been just confined to FMUs, Protected Areas and Community Forests. It is found that unmanaged forest area in the country are under tremendous pressure where major portion of the annual timber supply for rural communities are from these areas. The resource allocation for the rural supply are demand driven rather than on its sustainability and resource capacity. The good monitoring is not in good place too, to assess the demand and supply of timber. Therefore, considering this alarming situation, Management of these areas outside FMUs, PA s and Community Forest is one of the main programmes of the 12<sup>th</sup> FYP of the Department. The coming up of local forest management plan for the geog will ensure sustainable management of our forest resources and achieve the goal of placing all the country's resources under sustainable management.

Getena Gewog is located in the north of Chukha dzongkhag with an area of 214 sq.km/24202.30 hectares. The general terrain of the gewog is rugged and steep. The Gewog is covered with cool broadleaved forest as predominant forest type. The place is explored by the outsiders for extractions of burrs locally sold as *Phob* and *Dhapa*.

The Gewog consists of 7 villages with population of approximately 820 residing in 183 H/H. The few villages of the Gewog are connected with GC roads, farm roads, connected with safe drinking water, electrified and provided with adequate irrigation water. Farmers grow maize as main food crop. There are 5 community forests management groups in the Gewog. Currently, Beat In-Charge of Bongo Gewog provides forestry services to the farmers including Community Forest.

Besides various forest management regimes, local area management plan was developed with the following objectives;

- To regulate rural wood supply from Getena Forest Management Area on a sustainable basis.
- To supply rural timber to the rural communities on sustainable basis.
- To provide appropriate management interventions for improvement of forest resources.

Forest resource assessment has been carried out by field staffs from Gedru Forest Range under the direct supervision of Gedru Forest Division from May to June 2019.

This Forest Management Plan has been prepared by Pema Gyeltshen, Sr. Forest Ranger-II, Gedru Forest Division.

**The management plan will be strictly implemented by Forest Range Office, Gedru and is valid for the period 1<sup>st</sup> July 2020 to 31<sup>st</sup> June 2030.**

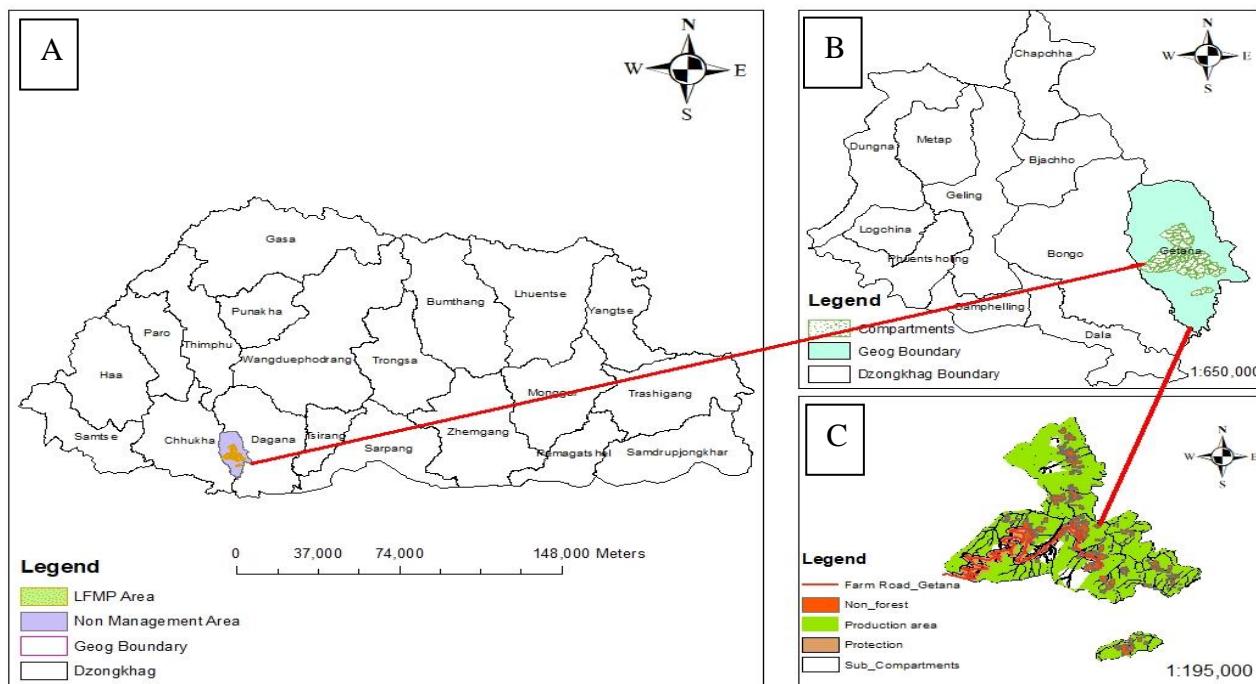

## Location and Extent

Getena Gewog is one of the Eleven Gewogs under Chukha dzongkhag. It is located in the east of Chukha dzongkhag. The Gewog is generally located in steep and rugged terrain. It is situated between the longitudes  $89^{\circ}64'961''$  and  $89^{\circ}84'420''$  and latitudes  $27^{\circ}05'721''$  and  $26^{\circ}78'139''$ .

Getena Gewog has total area of 24159.43 hectares of which 5089.59 hectares will be managed under this management plan. The details of various management regimes are shown in the table below.

**Table 1:** Different management regimes under Getena Geog.

| Management Regimes     | Names                | Areas (ha)      |
|------------------------|----------------------|-----------------|
| Community Forest       | 1. Daga CF           | 21.99           |

**Table 2:** Area statement by Land use and Forest type (LULC 2016)

| Land Use         | Area (ha) | Percent (%) Area |
|------------------|-----------|------------------|
| Broadleaf Forest | 21921.57  | 90.737           |
| Built_up         | 11.37     | 0.047            |
| Chuzhing         | 105.67    | 0.437            |
| Fir Forest       | 73.67     | 0.305            |
| Kamzhing         | 178.05    | 0.737            |
| Landslides       | 1.98      | 0.008            |
| Meadows          | 71.22     | 0.295            |
| Mixed Conifer    | 1265.7    | 5.239            |
| Rock outcrops    | 142.12    | 0.588            |
| Rivers           | 15.48     | 0.064            |
| Shrubs           | 372.6     | 1.542            |
| Total            | 24159.43  | 100.000          |

Broadleaved forest covers the majority of area with 90.737% and least by Fir Forest with 0.305%. However, Fir Forest is located only at the high elevation where there is no settlements living around.

**Figure 3:** Forest Type and Land Use Map (LULC 2016), Getena Geog.

## **2. THE FOREST MANAGEMENT AREA**

### **2.1. The Area**

The forest management area falls in the middle of Gewog area. It is covered with cool broadleaved forest as dominant forest type. The altitudinal range of the management area stretches from 1900 m to 3500 m above mean sea level. The non-management area are settlements, roads, agricultural land, restricted due to local beliefs and inaccessible areas. The forest management area covers the forested land accessible to local communities of the Getena Geog comprising mainly of broadleaf forest with hardwood forest at the lower elevations.

The other management regimes excluded from the plan but are located in Getena gewog is illustrated in the following table;

**Table 3:** Areas excluded from the management plan

| <b>Excluded Areas</b> | <b>Name</b>          | <b>Area (ha)</b> |
|-----------------------|----------------------|------------------|
| Community Forests     | 1. Daga CF           | 21.99            |
|                       | 2. Trashigang CF     | 41.03            |
|                       | 3. Phutsa CF         | 50.58            |
|                       | 4. Kuengacholing CF  | 113.78           |
|                       | 5. Sangay Choling CF | 134.74           |
| Non-management Area   |                      | 18750.59         |
| <b>Total</b>          |                      | <b>19112.71</b>  |

The total forest management area is 5089.59 ha, which comprises of non-forest, protection zones, inoperable areas and restricted areas by the local community due to local ethos.

**Table 4:** Forest Management Area for LFMP

| <b>Type</b>      | <b>Area (ha)</b> |
|------------------|------------------|
| Non-Forest Area  | 374.72           |
| Protection Zone  | 821.73           |
| In-Operable Area | 338.55           |
| Production Area  | 3554.59          |
| <b>Total</b>     | <b>5089.59</b>   |

### **2.2. Forest Type and Conditions**

The Forest Management Area lies in the cool broadleaved forest with sparse Fir and Mixed Conifer vegetation. The total broadleaved forest area under Getena gewog is 21,921.57 ha (90.74%) and only 21.88% (5089.59 ha) broadleaved forest is designated for the preparation of Local Forest Management Plan for Getena gewog. The general condition of the forest is good to average. The forest condition is poorer in the close proximity of villages due to intensive use. Forest type distribution as well as forest condition and canopy closure per compartment can be derived from the respective sheet in Annex 1. The forest management area is 100 % hardwood with young (4%), immature (17%), and mature (78%) with over mature (1%) forests. The average standing volume is only 61 m<sup>3</sup>/ha and the average basal area is 8.0 m<sup>2</sup>/ha.

### 2.3. Site and Forest Function

The average site condition is shown in the table below, the site condition for individual compartments or sub-compartments can be derived from Annex 1.

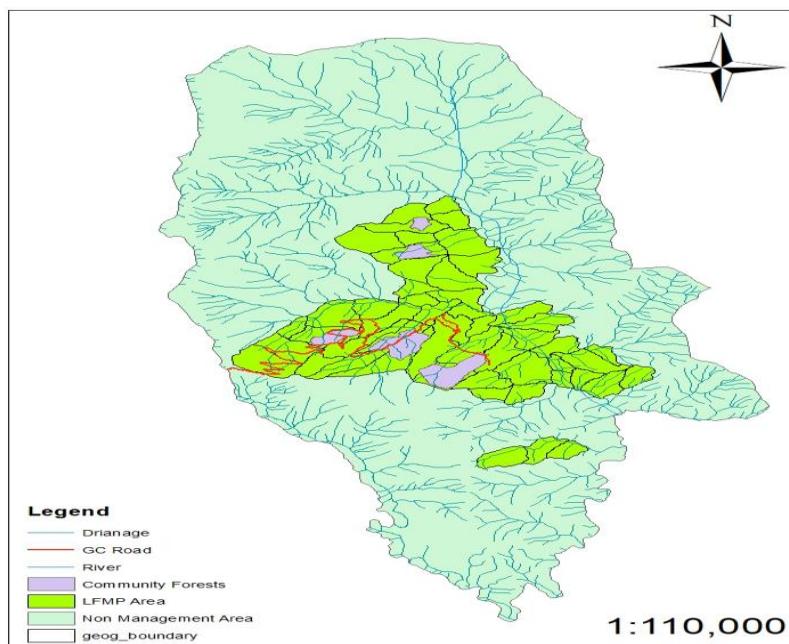

**Table 5:** Site information of the Area.

| Slope    | %  | Erosiveness | %  | Stability | %  |
|----------|----|-------------|----|-----------|----|
| Gentle   | 10 | Stable      | 10 | High      | 8  |
| Moderate | 87 | Moderate    | 88 | Moderate  | 89 |
| Steep    | 3  | Unstable    | 2  | Low       | 3  |

The forest management area comprises in general from moderate to steep slopes. In the eastern part there are some steep and rocky areas, which should be exempted from timber allocation (protection zone).

### 2.4. Accessibility

The gewog is connected with Gewog Center Road (GC road) of 87 km from Gedu town as well as farm road of 4 km to the nearest chewog (Cheyul) from geog center. However, Gata, Pangtsela, Trashigang and Daga chewog is still not connected with farm road and even there is no motorable road passing through most of the forest area. The forest management area is accessible but not by motorable road since the area does not have any motorable roads passing by except for two chiwogs namely Phutsa and Bachu.

Along the motorable road from Lachudolay to Geog Center (Bachu) via Phutsa, a road buffer of 200m uphill and 100m downhill (average 150m) was created and excluded for the timber harvesting.

**Figure 4:** Major Drainage system and road connectivity in the geog.

### 3. NWFP AND OTHER FOREST USES

The occurrence of NWFP in the forest management area is shown in the table below, for the distribution by compartment and sub compartment refer to Annex 1 and 2. In addition the location of abundant occurrence of NWFP is indicated in the forest management map.

**Table 6:** Occurrence of NWFP and important Forest Uses.

| NWFP     | Abundant (%) | Sparse (%) | Forest Uses | Intensive (%) | Extensive (%) |
|----------|--------------|------------|-------------|---------------|---------------|
| Bamboo   | 13           | 9          | Grazing     | 17            | 3             |
| Cane     | 2            | 1          | Shoksing    | 0             | 0             |
| Firewood | 26           | 24         | Lopping     | 8             | 5             |
| Daphne   | 12           | 6          |             |               |               |

The majority of NWFP found are bamboo and Daphne where bamboo is seen abundant under the oak forest and Daphne is seen very sparse in the management area. The local people use this bamboo for roofing and fencing purposes. Lopping are seen less in the area and such practices will have no major impact for the sustainable management of the area. Grazing is carried out almost throughout the whole forest management area in the immediate vicinity of the settlements.

### 4. SOCIO-ECONOMIC DATA

The following villages and settlements are located in the forest management area:

**Table 7:** Household and population information.

| Village Name | No. of Households | No. of Persons |
|--------------|-------------------|----------------|
| Daga         | 25                | 79             |
| Trashigang   | 18                | 56             |
| Phutsa       | 28                | 109            |
| Bachu        | 34                | 236            |
| Cheyul       | 47                | 297            |
| Pangtsela    | 19                | 27             |
| Gata         | 12                | 16             |
| <b>Total</b> | <b>183</b>        | <b>820</b>     |

Source: PHCB, 2017.

The total number of population till date is approximately 820 with 183 households (PHCB,2017) in the Gewog. There are seven villages with five Chiwogs in Getena Gewog. Getena Gewog has 1 community primary school, 1 BHU, RNR center, Gewog administration office, 3 Outreach Clinics (ORC) and 9 Village Health Workers (2 female and 7 male). The livelihood of the people of Getena

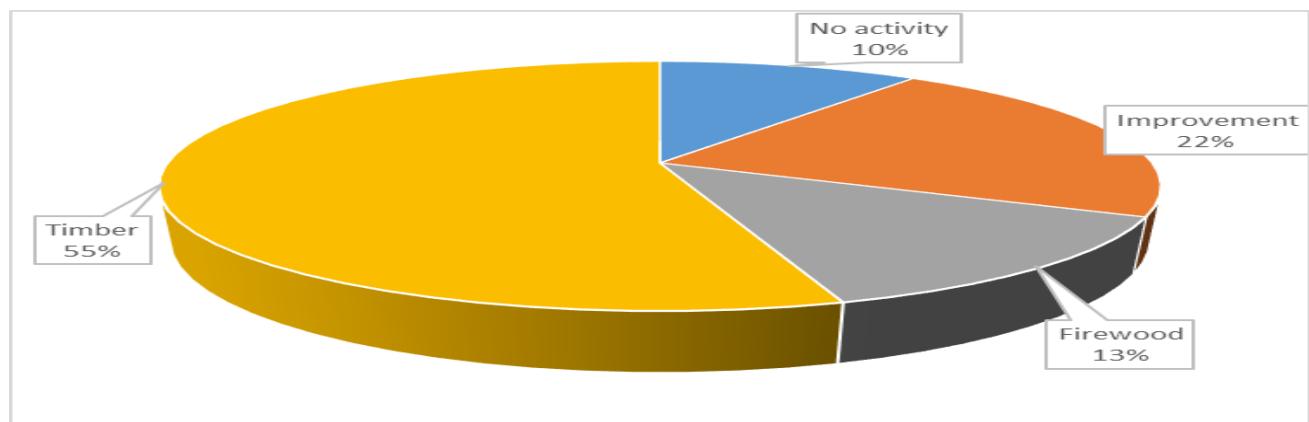

Gewog is mainly depended on Agriculture and livestock rearing. The food crops such as rice, wheat, Barley, Buckwheat and sweet buckwheat are cultivated with cardamom as main cash crop. Off-farm business such as constructions, carpentry and running shops also contribute to household income generation.

## 5. FUTURE MANAGEMENT

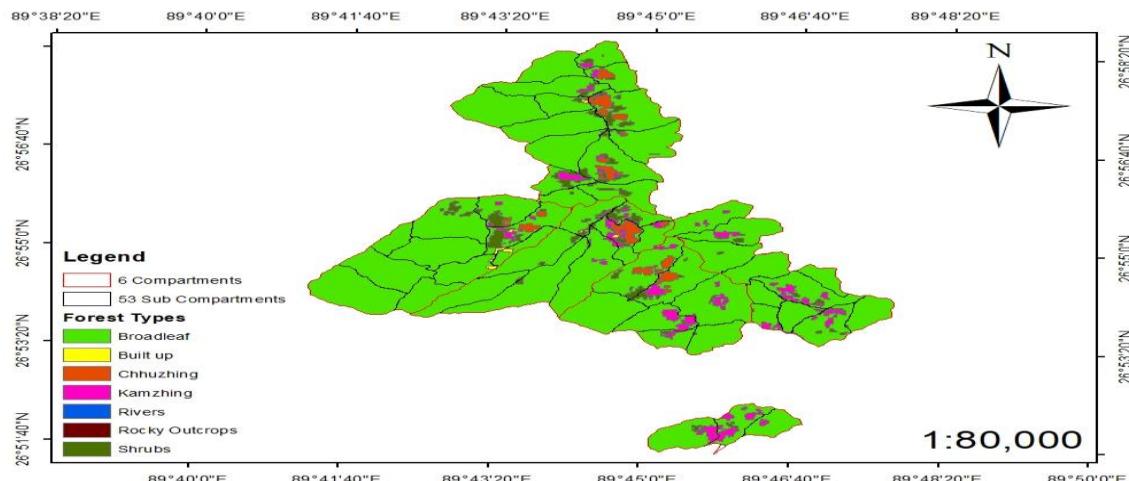

### 5.1. Management Options

The dominating forest management option is timber use. Higher elevations are still rich in timber, but they are quite far away from the villages. The sub-compartments in the Phutsa and Bachu region require some improvement activities, mainly planting of un-stocked parts.

The distribution of management options throughout the forest management area is shown in the graph below. The management option for each individual compartment can be derived from the compartment register and from the forest management map.

**Figure 5:** Forest Management option.

**Figure 6:** Compartment and Sub-compartment area map.

## **5.2. Tree Marking and Silviculture**

Tree marking is done in accordance with the “Tree Marking Guidelines” and the “Silvicultural Guidelines” prescribed by the Department of Forests and Park Services. The silvicultural system applied is single tree selection system. The principle of negative selection is applied in all tending and thinning operations. Marking of mature trees for felling is permitted only, when the immediate vicinity is sufficiently regenerated (low grazing pressure).

Grazing shall be controlled in all over-mature forests which are in the stage of natural regeneration. Un-stocked and sparsely stocked parts shall be re-planted with principal local species (species selection according to prevalent forest type).

## **6. YIELD REGULATION**

The sustainable annual allowable cut AAC<sub>sust.</sub> for the management area is calculated as follows:

$$\text{AAC}_{\text{sust.}} = \text{total standing volume} / \text{average rotation period.} = 1681 \text{ m}^3/\text{year}$$

Taking into account the forest type distribution, the average production period for the forest management area is 106 years. The total standing volume is 216830.6 m<sup>3</sup>.

The overall production potential as determined by the forest resources assessment is 177753 m<sup>3</sup>. Dividing the overall production potential by the planning period of 10 years gives the silvicultural AAC:

$$\text{AAC}_{\text{silv.}} = \text{total production potential} / 10 \text{ years} = 17775.3 \text{ m}^3/\text{year}$$

As the AAC<sub>sust.</sub> is lower than the AAC<sub>silv.</sub> the AAC is fixed at the level of the AAC<sub>sust.</sub>

**The Annual Allowable Cut for the Getena forest management area is fixed at 1681 m<sup>3</sup>.**

The AAC per ha is 0.5 m<sup>3</sup>.

Taking into account the fixed AAC of 1681 m<sup>3</sup> then the total production potential of the forest management area will be used in a period of about 177753/1681 = 106 years. As this period is considerably longer than the planning period of 10 years, there will be no shortage in the availability of wood during the planning period.

## **7. DEMAND/SUPPLY ASSESSMENT**

The demand for rural timber and firewood excluding Community Forests under Getena gewog was derived from the past allotment record maintained by Forest Range Office, Gedru. The current demand for forest resources is based on the average allotments from 2015-2018.

The annual timber supply potential is calculated by dividing the total production potential (in number of trees) by the number of years it will take to use up the production potential with the fixed AAC.

**Table 8:** Timber demand/supply scenario in number of trees.

| Product            | Total Production Potential | Silvicult. Annual Potential | Sustainable Annual Supply Potential* | Annual Demand | Demand - Supply |
|--------------------|----------------------------|-----------------------------|--------------------------------------|---------------|-----------------|
| Drashing/shingleps | 19640                      | 1964.0                      | 185.28                               | 56            | +129.28         |
| Chams              | 68270                      | 6827.0                      | 644.06                               | 190           | +454.06         |
| Tsims              | 8071                       | 807.1                       | 76.14                                | 100           | -23.86          |
| Poles              | 2139                       | 213.9                       | 20.18                                | 90            | -69.82          |

\*Remark: the total production potential divided 106 years

**Table 9:** Rural timber supplied to Getena Geog for last 5 years.

| Year | Drashing (Nos) | Cham (Nos) | Tsim (Nos) | Dangchung (Nos) |
|------|----------------|------------|------------|-----------------|
| 2015 | 96             | 400        | 320        | 0               |
| 2016 | 170            | 720        | 720        | 0               |
| 2017 | 176            | 560        | 560        | 0               |
| 2018 | 32             | 0          | 0          | 0               |
| 2019 | 25             | 144        | 265        | 0               |

Chams and Tsim are in high demand. However, demand for Tsim and Poles cannot be met from the annual AAC of the gewog for the planning period of 10 years. There are sufficient Drashing and Chams available.

**Table 10:** Firewood Demand/Supply scenario in m<sup>3</sup>

| Total Production Potential (Volume <sub>tot</sub> ) | Annual Supply Potential* | Annual Demand | Demand -Supply |
|---|--------------------------|---------------|----------------|
| 59292   | 559.36                   | 0             | +559.36        |

\*Remark: the total production potential divided 106 years

Firewood demand is calculated in truckloads. To compare it with the supply potential it has to be converted into standing volume equivalent. The conversion factor applied is:

- 1 truckload is equivalent to 8m<sup>3</sup> standing volume.
- For example: in 2014, 56 truckloads of firewood were allotted, and then this is equal to  $56 \times 8 = 448$  m<sup>3</sup> standing volume.

The annual supply potential is considerably higher than the average annual demand of firewood of the last 10 years. Whenever possible the firewood is in demand, deformed trees would be supply as fire-wood. However, lops and tops will be supply in free of royalty for rural use only.

Whenever possible the wood demand of one village should be allotted from the corresponding village intervention zone (compartment).

## **8. MONITORING**

Monitoring is important for the control of the AAC. Each tree, which is marked for felling must be recorded in the tree marking book.

It is also important to:

- ❖ Ensure utilization of subsidized timber for the genuine purposes for rural house building only.
- ❖ Plan rural marking activity consistently as per the schedule duly approved by DYT, which spells rural marking activity to be carried out annually.
- ❖ Conduct rural timber utilization monitoring regularly as per the Forest and Nature Conservation Rules and Regulations, 2017.
- ❖ Maintain comprehensive data so as to facilitate monitoring efficiently.

### **Explanations of abbreviations used in the compartment records**

All information and data indicated in the sub-compartment record are related to the operable production area only.

|                                |  |
|--------------------------------|--|
| A                              | Abundant occurrence of NWFP                                |
| Bas. Area (m <sup>2</sup> /ha) | Basal area per ha of the sub-compartment                   |

| <b>Number of trees/ha by diameter class (dbh&gt;10 cm)</b> <p>The chart displays the density of different tree species across six diameter classes. The y-axis represents the number of trees per hectare from 0 to 25. The x-axis shows diameter classes from 10-20 to 90+ cm. Species represented include Beilschmiedia spp., Cinnamomum spp., Exbucklandia, Litsea spp., Michelia spp., Persea spp., Quercus spp., Schima spp., Walnut, and Conifer spp.</p> <table border="1"> <thead> <tr> <th>Diameter Class</th> <th>Beilschmiedia spp.</th> <th>Cinnamomum spp.</th> <th>Exbucklandia</th> <th>Litsea spp.</th> <th>Michelia spp.</th> <th>Persea spp.</th> <th>Quercus spp.</th> <th>Schima spp.</th> <th>Walnut</th> <th>Conifer spp.</th> </tr> </thead> <tbody> <tr><td>10-20</td><td>5</td><td>3</td><td>2</td><td>2</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td></tr> <tr><td>20-30</td><td>4</td><td>5</td><td>2</td><td>3</td><td>2</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td></tr> <tr><td>30-40</td><td>3</td><td>4</td><td>2</td><td>3</td><td>2</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td></tr> <tr><td>40-50</td><td>2</td><td>3</td><td>2</td><td>2</td><td>2</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td></tr> <tr><td>50-60</td><td>1</td><td>2</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td><td>1</td></tr> <tr><td>60-70</td><td>0</td><td>1</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td><td>0</td></tr> </tbody> </table> |                    |                            |   |                                 |                   |             |              |                   |        |              | Diameter Class | Beilschmiedia spp. | Cinnamomum spp. | Exbucklandia | Litsea spp. | Michelia spp. | Persea spp. | Quercus spp. | Schima spp. | Walnut | Conifer spp. | 10-20 | 5 | 3 | 2 | 2 | 1 | 1 | 1 | 1 | 1 | 1 | 20-30 | 4 | 5 | 2 | 3 | 2 | 1 | 1 | 1 | 1 | 1 | 30-40 | 3 | 4 | 2 | 3 | 2 | 1 | 1 | 1 | 1 | 1 | 40-50 | 2 | 3 | 2 | 2 | 2 | 1 | 1 | 1 | 1 | 1 | 50-60 | 1 | 2 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 60-70 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

| <b>Number of trees/ha by diameter class (dbh&gt;10 cm)</b> <p>The chart displays the density of different tree species across five diameter classes. The y-axis represents the number of trees per hectare from 0 to 35. The x-axis shows diameter classes from 10-20 to 90+. Species include Beilschmiedia spp., Cinnamomum spp., Exbucklandia, Litsea spp., Michelia spp., Persea spp., Quercus spp., Schima spp., and Walnut. The legend indicates that hatched areas represent broadleaf species like Beilschmiedia, Cinnamomum, Exbucklandia, Litsea, Michelia, and Schima, while solid areas represent coniferous species like Persea, Quercus, and Walnut.</p>  |                     |                             |   |                                 |                   | <table border="1"> <thead> <tr> <th>Forest Type</th> <th>%</th> <th>Stand Type</th> <th>%</th> <th>NWFP+firew.</th> </tr> </thead> <tbody> <tr> <td>Hemlock</td> <td></td> <td>Plantation</td> <td></td> <td>Type</td> </tr> <tr> <td>Fir</td> <td></td> <td>Natural</td> <td>100</td> <td>Firewood</td> </tr> <tr> <td>Spruce</td> <td></td> <td>Coppice</td> <td></td> <td>Bamboo</td> </tr> <tr> <td>Mixed Conifer</td> <td></td> <td><b>Canopy</b></td> <td>%</td> <td>Cane</td> </tr> <tr> <td>Blue Pine</td> <td></td> <td>Dense</td> <td></td> <td>Daphne</td> </tr> <tr> <td>Chir Pine</td> <td></td> <td>Closed</td> <td>83</td> <td>Fern</td> </tr> <tr> <td>Hardwood</td> <td>100</td> <td>Open</td> <td>17</td> <td>Broom</td> </tr> <tr> <td>Mixed H/C</td> <td></td> <td>Unstocked</td> <td></td> <td><b>Forest Use</b></td> </tr> <tr> <td><b>Age Class</b></td> <td><b>%</b></td> <td><b>Condition</b></td> <td><b>%</b></td> <td>I E</td> </tr> <tr> <td>Young</td> <td></td> <td>Good</td> <td></td> <td>Grazing</td> </tr> <tr> <td>Immature</td> <td></td> <td>Average</td> <td>83</td> <td>Shokshing</td> </tr> <tr> <td>Mature</td> <td>100</td> <td>Poor</td> <td>17</td> <td>Lopping</td> </tr> <tr> <td>Overmature</td> <td></td> <td colspan="3"><b>Site Characteristics</b></td> </tr> <tr> <td><b>Slope</b></td> <td><b>%</b></td> <td><b>Erosiveness</b></td> <td><b>%</b></td> <td><b>Soil Cover</b></td> </tr> <tr> <td>Gentle</td> <td>17</td> <td>Stable</td> <td></td> <td>High</td> </tr> <tr> <td>Moderate</td> <td>83</td> <td>Moderate</td> <td>100</td> <td>Moderate</td> </tr> <tr> <td>Steep</td> <td></td> <td>Unstable</td> <td></td> <td>Low</td> </tr> </tbody> </table> |       |       |       |       | Forest Type | %                   | Stand Type              | %    | NWFP+firew. | Hemlock |  | Plantation |  | Type | Fir |                | Natural | 100 | Firewood | Spruce |       | Coppice |       | Bamboo | Mixed Conifer |       | <b>Canopy</b> | %    | Cane | Blue Pine          |  | Dense |  | Daphne | Chir Pine |  | Closed | 83 | Fern | Hardwood | 100 | Open | 17              | Broom | Mixed H/C |  | Unstocked |  | <b>Forest Use</b> | <b>Age Class</b> | <b>%</b> | <b>Condition</b> | <b>%</b> | I E | Young |              | Good |  | Grazing | Immature |  | Average | 83 | Shokshing | Mature | 100 | Poor | 17 | Lopping     | Overmature |  | <b>Site Characteristics</b> |  |  | <b>Slope</b> | <b>%</b> | <b>Erosiveness</b> | <b>%</b> | <b>Soil Cover</b> | Gentle | 17 | Stable        |  | High | Moderate | 83 | Moderate | 100 | Moderate | Steep |  | Unstable |  | Low |             |  |  |  |  |  |  |  |  |  |  |  |  |              |  |  |  |  |  |  |  |  |  |  |  |  |             |  |     |  |  |  |    |   |  |  |  |    |    |        |  |  |  |  |  |  |  |  |  |  |  |  |                  |  |    |    |    |  |    |    |  |  |  |    |    |              |  |  |  |  |  |  |  |  |  |  |  |  |              |  |     |    |    |  |    |    |  |  |  |    |     |

| <b>Number of trees/ha by diameter class (dbh&gt;10 cm)</b> <p>The chart shows the distribution of tree species across different diameter classes. The y-axis represents the number of trees per hectare from 0 to 30. The x-axis represents diameter classes. Species include Beilschmiedia spp., Cinnamomum spp., Exbucklandia, Litsea spp., Michelia spp., Persea spp., Quercus spp., Schima spp., Walnut, and Other Broadleaves. The legend indicates that hatched bars represent broadleaf species and solid bars represent coniferous species.</p> |               |                             |   |                   |  |            | <table border="1"> <thead> <tr> <th>Forest Type</th> <th>%</th> <th>Stand Type</th> <th>%</th> <th>NWFP+firew.</th> <th>A</th> <th>S</th> </tr> </thead> <tbody> <tr> <td>Hemlock</td> <td></td> <td>Plantation</td> <td></td> <td>Type</td> <td>%</td> <td>%</td> </tr> <tr> <td>Fir</td> <td></td> <td>Natural</td> <td>100</td> <td>Firewood</td> <td>50</td> <td>20</td> </tr> <tr> <td>Spruce</td> <td></td> <td>Coppice</td> <td></td> <td>Bamboo</td> <td>30</td> <td>20</td> </tr> <tr> <td>Mixed Conifer</td> <td></td> <td><b>Canopy</b></td> <td>%</td> <td>Cane</td> <td></td> <td></td> </tr> <tr> <td>Blue Pine</td> <td></td> <td>Dense</td> <td></td> <td>Daphne</td> <td></td> <td></td> </tr> <tr> <td>Chir Pine</td> <td></td> <td>Closed</td> <td>80</td> <td>Fern</td> <td></td> <td></td> </tr> <tr> <td>Hardw ood</td> <td>100</td> <td>Open</td> <td>20</td> <td>Broom</td> <td></td> <td></td> </tr> <tr> <td>Mixed H/C</td> <td></td> <td>Unstocked</td> <td></td> <td><b>Forest Use</b></td> <td>I</td> <td>E</td> </tr> <tr> <td><b>Age Class</b></td> <td>%</td> <td><b>Condition</b></td> <td>%</td> <td>Type</td> <td>%</td> <td>%</td> </tr> <tr> <td>Young</td> <td></td> <td>Good</td> <td>30</td> <td>Grazing</td> <td></td> <td></td> </tr> <tr> <td>Immature</td> <td></td> <td>Average</td> <td>70</td> <td>Shokshing</td> <td></td> <td></td> </tr> <tr> <td>Mature</td> <td>100</td> <td>Poor</td> <td></td> <td>Lopping</td> <td></td> <td></td> </tr> <tr> <td>Overmature</td> <td></td> <td><b>Site Characteristics</b></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td><b>Slope</b></td> <td>%</td> <td><b>Erosiveness</b></td> <td>%</td> <td><b>Soil Cover</b></td> <td colspan="2" style="text-align: center;">%</td></tr> <tr> <td>Gentle</td> <td></td> <td>Stable</td> <td></td> <td>High</td> <td colspan="2"></td></tr> <tr> <td>Moderate</td> <td>100</td> <td>Moderate</td> <td>100</td> <td>Moderate</td> <td colspan="2" style="text-align: center;">100</td></tr> <tr> <td>Steep</td> <td></td> <td>Unstable</td> <td></td> <td>Low</td> <td colspan="2" rowspan="2"></td></tr> </tbody> </table> |          |       |       |       |      |                |            |      |  |  | Forest Type | % | Stand Type | % | NWFP+firew. | A | S | Hemlock |  | Plantation |  | Type | % | % | Fir |  | Natural | 100 | Firewood | 50 | 20 | Spruce |  | Coppice |  | Bamboo | 30 | 20 | Mixed Conifer |  | <b>Canopy</b> | % | Cane |  |  | Blue Pine |  | Dense |  | Daphne |  |  | Chir Pine |  | Closed | 80 | Fern |  |  | Hardw ood | 100 | Open | 20 | Broom |  |  | Mixed H/C |  | Unstocked |  | <b>Forest Use</b> | I | E | <b>Age Class</b> | % | <b>Condition</b> | % | Type | % | % | Young |  | Good | 30 | Grazing |  |  | Immature |  | Average | 70 | Shokshing |  |  | Mature | 100 | Poor |  | Lopping |  |  | Overmature |  | <b>Site Characteristics</b> |  |  |  |  | <b>Slope</b> | % | <b>Erosiveness</b> | % | <b>Soil Cover</b> | % |  | Gentle |  | Stable |  | High |  |  | Moderate | 100 | Moderate | 100 | Moderate | 100 |  | Steep |  | Unstable |  | Low |  |  |

| <b>Number of trees/ha by diameter class (dbh&gt;10 cm)</b><br> <p>Detailed description: The chart shows the density of trees across five diameter classes. The highest density is in the 30-40 cm class, reaching approximately 25 trees/ha. Other classes show lower densities, with the 10-20 cm class around 5 trees/ha and others below 10.</p> <table border="1" style="margin-top: 10px; width: 100%;"> <tr> <td>Beilschmiedia spp.</td><td>Cinnamomum spp.</td><td>Exbucklandia</td> </tr> <tr> <td>Litsea spp.</td><td>Michelia spp.</td><td>Persea spp.</td> </tr> <tr> <td>Quercus spp.</td><td>Schima spp.</td><td>Walnut</td> </tr> <tr> <td>Other Broadleave</td><td>Conifer spp.</td><td></td> </tr> </table> |                                |                                |   |  |          | Beilschmiedia spp.             | Cinnamomum spp. | Exbucklandia | Litsea spp. | Michelia spp. | Persea spp.              | Quercus spp. | Schima spp.  | Walnut       | Other Broadleave | Conifer spp. |  | <b>Forest Type</b> | % | <b>Stand Type</b> | % | <b>NWFP+firew.</b> | <b>A</b> | <b>S</b> |
